## New Architecture For The Underground:

**New Architecture for the Underground** David J. Taylor,2001-06-01      **Below Ground Level** Ernst von Meijenfeldt,2002-10-25 Any space that involves descending from our typical aboveground environment is a provocation to our sensory perceptions Such hidden spaces evoke latent mythical images and confront us with the clash between nature and artifice in our built environment This book explores the character use and design of underground space as a space of its own International examples of commercial premises restaurants sports facilities subway stations museums churches libraries concert halls houses and other building types form the core material Interviews with many renowned designers including Norman Foster Floris Alkemade OMA and Francine Houben Mecanoo convey the architects own views on the subject Essays reflect on the cultural aspects planning conditions design considerations technical requirements and sustainability aspects of building below ground level Chapters include Urban Development Architecture Functions Perception and Cognition Constructions Energy and Interior Climate      The Architect Arthur Holland Forbes,1930      Old & New Architecture National Trust for Historic Preservation in the United States,Society of Architectural Historians. Latrobe Chapter (Washington, D.C.),American Institute of Architects. Washington Metropolitan Chapter,1980      Underground Space Use. Analysis of the Past and Lessons for the Future, Two Volume Set Sören Erdem,Tülin Solak,2005-06-30 The 200 papers in this two volume set are a selection of work by tunnel experts from Europe Asia and the USA and also showcase the work of the host nation Turkey As the title implies the scope of the book is enormous covering every aspect of tunnelling from contract management to safety The book is of special interest to researchers scient      Underground Alessandra Cianchetta,Marc Armengaud,2017-01-08 Under the surface of cities and within build environments lay hidden layers that for some play a key role in the urban scenario when others got lost in transformation During the 20th Century both theoretical works and technical innovations gave rise to several massive urban underground projects in New York London and Paris directly contributing to the definition of the new profession of urban planner This underground planning and development in major cities was influential to a discussion on whether the city e tm s future was going to be above or underground Underground planning therefore corresponds to a key moment in modern urbanism and architecture both in the East and the West The dimensions of the infrastructure and large complex facilities that resulted from this time do not allow us to ignore them simply because they do not correspond to our sensibilities any more How do we learn how to develop projects in these underground built environments This book proposes to redeploy these substantial structures and their potential Looking at urban and architectural strategies from their basement stratifications up reveals a rich cultural background that is crucial to understanding of the metropolitan development in cities like London Paris New York Stockholm Toronto Istanbul Moscow Abu Dhabi Montreal and Houston Such a topic brings design and theory together in a renewed paradigm as massive underground transformations are about to take place for instance in the Paris metropolitan region at the occasion of the

Grand Paris new subway network The questions set by the underground confront simultaneously several fields such as urbanism architecture public space infrastructure landscape night time cultures etc Illustrated by the innovative work of the award winning French Practice AWP this volume asks questions such as how should we rethink underground parking in respect to less car use and where should the dead be buried in the future With the need for densification in cities it proposes we need to review options below ground as well as the high rise options It also addresses issues of infrastructure

transportation and 21st Century energy mining [Equality In the Year 2000](#) Mack Reynolds,2013-08-29 Julian West had been put into a hypnotic trance and placed in a sealed room Then the house burned down and he was forgotten until he awoke forty years later It was the year 2000 and it seemed like Utopia But would it be Utopia for Julian West He was a man of the past totally unable to adapt to the unbelievable social political and cultural changes totally unable to assimilate the explosive advances in all branches of knowledge Julian West was a child lost among the wonders of the Twenty First Century but he would have to adapt and learn if he wanted to survive

**The Architect & Building News** ,1930 [Identity by Design](#) Georgia Butina-Watson,Ian Bentley,2007-06-07 In a world of increasing globalisation where one high street becomes interchangeable with the next Identity by Design addresses the idea of place making and the concept of identity looking at how these things can be considered as an integral part of the design process Structured around a series of case studies including Prague Mexico Malaysia and Boston the authors discuss an array of design approaches to explain and define the complex interrelated concepts The concluding sections of the book suggest ideas for practical application in future design processes With full colour images throughout this book takes the discussion of place identity to the next level and will be valuable reading for all architects urban designers planners and landscape architects

[American Architect](#) ,1902 [Seoul](#) Rafael Luna,2024-04-30 This book focuses on understanding how a megacity like Seoul can be read as a formal architectural composition and not an endless urban sprawl In a broader sense the book discusses the dichotomy between city and urbanization city being an architectural problem of bounded forms while urbanism is an infrastructural project of expansion It is an uncontested reality that urbanization is a continuous global process that has produced nebulous conurbations labeled as megacities These expand beyond the virtual administrative boundary of any said city producing a discrepancy between an area of administrative control and the real physical condition of human settlement If there were a better formal understanding of megacities through their typological architectural conditions then there could be a better assessment of the qualitative state of urbanization Avant garde groups from the 1950s 1960s and 1970s such as Team X the Situationist the Structuralist and the Metabolist worked with ideas of megaforms and megastructures to address this issue Although most of these proposals remained as paper architecture this book reevaluates some of these ideas for the 21st century megacity using Seoul as a case study due to its clear typological formations produced over its different periods of governance The aim is to present the concept for an infra architectural hybrid model of typological islands and subterranean megastructure that

organizes Seoul as a flexible multi linear city This book will be of interest to academics and students of architecture urban geography and Asian studies    **The Architect and Building News** ,1930    **The Architect** ,1874    **Atlas of Oculoplastic and Orbital Surgery** Thomas C.
