## **New Capabilities For Strategic Mobility Analysis Using Mathematical Programming:**

**New Capabilities for Strategic Mobility Analysis Using Mathematical Programming** ,1995 Drawbacks in the ability of current models to evaluate how many assets would be required to achieve a specific closure delivery date prompted RAND to recommend that the Joint Staff develop new models specifically to address mobility requirements issues for military transportation systems RAND identified two technologies as promising knowledge based modeling and mathematical programming modeling This report describes the development and operating characteristics of a family of strategic mobility models using the mathematical programming approach It also includes the formulas and GAMs computer programs so that others can verify duplicate or extend the model

New Capabilities for Strategic Mobility Analysis John Frederic

Schank,1994 Previous research for the Logistics Directorate J4 of the Joint Staff JS found that although the JS J4 uses mobility models in several distinctly different types of analyses it usually uses only a single specialized type of model a type that is inappropriate for many of the JS s more important analyses Schank Mattock et al 1991 In general the typical military mobility analysis includes information about cargoes the location of what needs to be moved when it will be available to move and when it has to be delivered about the transport network distances throughput capacities roadbed conditions right of way constraints etc and about transport assets the number and type of available vehicles structures and equipment and the schedules and costs under which additional or newer types can be procured Depending on the problem or operation under consideration these components are grouped and analyzed three different ways
