Glycemic Index Food Guide: the Open Secret Tips to Low GI Foods for a Nutritious Low Glycemic Diet That Can Help You Avoid Hyperglycemia and Diabetes! Pamela Stevens, 2016-06-25 Without doubt we are well aware today of the benefits of Glycemic Index GI which started like a project in 1981 at the University of Toronto where the concept was originally developed and the result called the Glycemic Index and the many impacts it has had on the management of sugar bias conditions Yes this project team was led by Dr David Jenkins but the reasoning behind the development of this concept is to gauge the effect of carbohydrates on the content of glucose in the blood This means that for anybody that is out to regulate his or her blood glucose content owing to hyperglycemia or diabetes the glycemic index is a concept that must be embraced Naturally since diabetes is already hitting the epidemic mark in the United States alone and the rest of the world cannot be said to be totally free the discovery of this concept was a highly welcomed development at that auspicious time And in fact it still is today Besides that the situation was getting even worse since more people are being diagnosed with this seemingly intimidating disease that usually lead to other medical complications like the deadly kidney failure So it was a timely concept as you will see later on it will be wisdom for persons with diabetes to get acquainted with the Glycemic Index so as to be well equipped by knowing the diet plan to stick to and the foods to kick off their present diet plan To start with one thing you will need to know is that the class of food called carbohydrates typically contains varieties of food groups which produce different types of sugar during metabolic breakdown As a matter of fact persons afflicted with diabetes usually find it tough to break down some food items especially the ones that are having high carbohydrate contents I mean their system cannot simply handle it The truth is that with their digestive system working at a slow pace starches and sugars are absorbed into the blood resulting into excessive glucose in the blood stream Therefore persons suffering from diabetes are seriously admonished to reduce their carbs consumption because of the slowness of their system to digest carbs Well I will like you to get your copy of this book to get access to the full details of the way to go about managing your condition Yes get the book Glycemic Index Food Guide The Open Secret Tips to Low GI Foods for a Nutritious Low Glycemic Diet That Can Help You Avoid Hyperglycemia and Diabetes

**Glycemic Diet Cookbook** Aaron Nelson Ph D, 2020-09-04 The low glycemic low GI diet is based on the concept of the glycemic index GI Studies have shown that the low GI diet may result in weight loss reduce blood sugar levels and lower the risk of heart disease and type 2 diabetes However the way it ranks foods has been criticized for being unreliable and failing to reflect foods overall healthiness The glycemic index GI of a food is a measure of how a specific food with carbohydrates causes blood sugar to rise It is given as a number compared to the effect on your blood sugar of eating either glucose a type of sugar or white bread When you eat a food or beverage containing carbohydrates your body

breaks down the carbs into a type of sugar called glucose The glucose goes into your bloodstream and causes your blood glucose blood sugar levels to rise Compare to low glycemic foods high glycemic foods lead to a quicker and greater spike in blood sugar levels These spikes are considered unhealthy for a few reasons They raise your average blood glucose levels They place a higher demand for insulin on your body They lead to more dramatic dips in blood glucose after the spike potentially causing hunger carbohydrate cravings and weakness A low GI diet and meal plan can help you avoid the blood sugar roller coaster but the GI is not on the nutrition label of most foods Instead you will probably to look at a list of the GI of foods The following are several low glycemic foods The three GI ratings are Low 55 or fewerMedium 56 69High 70 or moreFoods with a low GI value are the preferred choice They re slowly digested and absorbed causing a slower and smaller rise in blood sugar levels On the other hand foods with a high GI value should be limited They re quickly digested and absorbed resulting in a rapid rise and fall of blood sugar levels You can use this database to find the GI value and glycemic load described below of common foods It s important to note that foods are only assigned a GI value if they contain carbs Hence foods without carbs won t be found on GI lists
