*Smart Sensor Interfaces* Johan Huijsing, Gerard C.M. Meijer, 2012-12-06 *Smart Sensor Interfaces* brings together in one place important contributions and up to date research results in this fast moving area *Smart Sensor Interfaces* serves as an excellent reference providing insight into some of the most challenging research issues in the field Low-Cost Smart Sensor Interfacing Fransiscus Maria Leonardus van der Goes, 1996-01-01 **Ultra Low Power Capacitive Sensor Interfaces** Wouter Bracke, Robert Puers, Chris Van Hoof, 2007-06-15 The increasing performance of smart microsystems merging sensors signal processing and wireless communication promises to have a pervasive impact during the coming decade These autonomous microsystems find applications in sport evaluation health care environmental monitoring and automotive systems They gather data from the physical world convert them to electrical form compensate for interfering variables or non linearities and either act directly on them or transfer it to other systems Most often these sensor systems are developed for a specific application This approach leads to a high recent design cost A generic front end architecture where only the sensors and the microcontroller software are customized to the selected application would reduce the costs significantly This work presents a new generic architecture for autonomous sensor nodes The modular design methodology provides a flexible way to build a complete sensor interface out of configurable blocks The settings of these blocks can be optimized according to the varying needs of the application Furthermore the system can easily be expanded with new building blocks The modular system is illustrated in a Generic Sensor Interface Chip GSIC for capacitive sensors Many configuration settings adapt the interface to a broad range of applications The GSIC is optimized for ultra low power consumption It achieves an ON state current consumption of 40 nA **Smart Sensor Systems** Gerard Meijer, 2008-11-26 With contributions from an internationally renowned group of experts this book uses a multidisciplinary approach to review recent developments in the field of smart sensor systems providing complete coverage of all important system and design aspects their building blocks and methods of signal processing It examines topics over the whole range of sensor technology from the theory and constraints of basic elements the applied techniques and electronic up to the level of application orientated issues Developed as a complementary volume to *Smart Sensor Systems* Wiley 2008 which introduces the theoretical foundations this volume focuses on practical applications including State of the art techniques for designing smart sensors and smart sensor systems with measurement techniques at system level such as collaboration and trimming and impedance measurement techniques Sensing elements and sensor systems for the measurement of mechanical quantities and microarrays for DNA detection Circuit design for sensor systems such as the design of low noise amplifiers and measurement techniques at device level such as dynamic offset cancellation and optical imagers Implantable smart sensors for biomedical applications and automotive sensors A supplementary website hosts case studies and a solutions manual to the problems *Smart Sensor Systems Emerging Technologies and Applications* will greatly benefit final year undergraduate and
