**Model Order Reduction Techniques with Applications in Finite Element Analysis** Zu-Qing Qu,2010-10-13 Despite the continued rapid advance in computing speed and memory the increase in the complexity of models used by engineers persists in outpacing them Even where there is access to the latest hardware simulations are often extremely computationally intensive and time consuming when full blown models are under consideration The need to reduce the computational cost involved when dealing with high order many degree of freedom models can be offset by adroit computation In this light model reduction methods have become a major goal of simulation and modeling research Model reduction can also ameliorate problems in the correlation of widely used finite element analyses and test analysis models produced by excessive system complexity Model Order Reduction Techniques explains and compares such methods focusing mainly on recent work in dynamic condensation techniques Compares the effectiveness of static exact dynamic SEREP and iterative dynamic condensation techniques in producing valid reduced order models Shows how frequency shifting and the number of degrees of freedom affect the desirability and accuracy of using dynamic condensation Answers the challenges involved in dealing with undamped and non classically damped models Requires little more than first engineering degree mathematics and highlights important points with instructive examples Academics working in research on structural dynamics MEMS vibration finite elements and other computational methods in mechanical aerospace and structural engineering will find Model Order Reduction Techniques of great interest while it is also an excellent resource for researchers working on commercial finite element related software such as ANSYS and Nastran

**Model Order Reduction Techniques with Applications in Finite Element Analysis** Zu-Qing Qu,2004-08-10 This monograph explains the principles and applications of model reduction techniques and the dynamic condensation technique in particular It covers all the potentially useful condensation methods including static exact and iterative dynamic condensation and SEREP

**System- and Data-Driven Methods and Algorithms** Peter Benner,et al.,2021-11-08 An increasing complexity of models used to predict real world systems leads to the need for algorithms to replace complex models with far simpler ones while preserving the accuracy of the predictions This two volume handbook covers methods as well as applications This first volume focuses on real time control theory data assimilation real time visualization high dimensional state spaces and interaction of different reduction techniques
