Object-oriented Programming Systems, Languages, and Applications Jerry L. Archibald, Mark C. Wilkes, ACM Special Interest Group on Programming Languages, 1994      **ECOOP '94 - Object-Oriented Programming** Mario Tokoro, Remo Pareschi, 1994-06-15 This volume contains the proceedings of the 8th European Conference on Object Oriented Programming ECCOP 94 held in Bologna Italy in July 1994 ECOOP is the premier European event on object oriented programming and technology The 25 full refereed papers presented in the volume were selected from 161 submissions they are grouped in sessions on class design concurrency patterns declarative programming implementation specification dispatching and experience Together with the keynote speech Beyond Objects by Luc Steels Brussels and the invited paper Putting Objects to Work by Norbert A Streitz GMD IPSI Darmstadt they offer an exciting perspective on object oriented programming research and applications      *OOPSLA '93*, 1993      *Business Object Design and Implementation II* Dilip Patel, Jeff Sutherland, Joaquin Miller, 2012-12-06 This proceedings contains some of the papers presented at the Business Object and Implementation Workshops held at OOPSLA 96 OOPSLA 97 and OOPSLA 98 The main theme of the workshops is to document the evolution of business objects from any perspectives including modelling implementation standards and applications The 1996 workshop intended to clarify the specification design and implementation of interoperable plug and play distributed business object components and their suitability for delivery of enterprise applications and to assess the impact of the WWW and more specifically the Intranet on the design and implementation of business object components The main focus of the workshop was What design patterns will allow implementation of business objects as plug and play components How can these components be assembled into domain specific frameworks What are the appropriate architectures mechanisms as distributed object systems What for implementing these frameworks organisational and development process issues need to be addressed to successfully deliver these systems Is this approach an effective means for deploying enterprise application solutions The third annual workshop OOPSLA 97 was jointly sponsored by the Accredited Standards Committee X3H7 Object Information Management Technical Committee and the Object Management Group OMG Business Object Domain Task Force BODTF for the purpose of soliciting technical position papers relevant to the design and implementation of Business Object Systems      Model Driven Architecture Uwe Aßmann, Mehmet Aksit, Arend Rensink, 2005-08-25 Model Driven Architecture MDA is an initiative proposed by the Object Management Group OMG for platform generic software development MDA separates the specification of system functionality from the implementation on a specific platform It is aimed at making software assets more resilient to changes caused by emerging technologies While stressing the importance of modeling the MDA initiative covers a wide spectrum of research areas Further efforts are required to bring them into a coherent approach based on open standards and supported by matured tools and techniques This volume contains the selected papers of software workshop on Model Driven Architecture Foundations and Applications MDAFA MDAFA 2003 held at the University of Twente Twente The

Netherlands June 26 27 2003 and MDAFA 2004 held at Linköping University Linköping Sweden June 10 11 2004 The goal of the workshops was to understand the foundations of MDA to share experience in applying MDA techniques and tools and to outline future research directions The workshops organizers encouraged authors of accepted papers to re-submit their papers to a post-workshop reviewing process 15 of these papers were accepted to appear in this volume on MDA IBM Systems Journal International Business Machines Corporation, 1999 *Testing Object-Oriented Software* Imran Bashir, Amrit L. Goel, 2012-12-06 The rise of object-oriented OO software development seems to have helped improve software quality but it has not of course eliminated all possibility of error Thus software testing is at least as important today as it ever has been Testing as a centerpiece of quality assurance efforts only increases in value as society becomes more and more reliant on software Testing OO components and even OO systems is not very difficult once you know how to do it But until now there have been few accounts of how to do it well and none that adequately characterize testing across the life cycle of large OO software production efforts This book combines insights from research on OO testing with insights from industrial testing efforts to produce an account that should be valuable to anyone interested in the theory and practice of testing OO software This book provides extensive coverage of testing methods applicable to OO software development as well as discussions of underlying concepts and technical underpinnings that enable you to devise additional techniques of your own It is unlikely that you will apply every test process review criterion or metric described in this book to your software project If you have a small project it is unlikely that you will apply more than a few of them But the breadth of coverage allows you to select and customize them with full knowledge of the alternatives and of the options available if you need to extend testing efforts

ECOOP ..., 1995 *A Reactive Approach to Comprehensive Global Garbage Detection* Sylvain R. Louboutin, 1999-02

Comprehensive global garbage detection GGD in object-oriented distributed systems i.e. GGD intrinsically able to detect distributed cycles of garbage has mostly been addressed via graph tracing algorithms Graph tracing algorithms must account for every live object in the system before any resource can actually be reclaimed which compromises both their scalability and robustness in a distributed environment Alternative non-comprehensive approaches trade off comprehensiveness for scalability and robustness under the assumptions that distributed cycles of garbage are rare and that all comprehensive algorithms are necessarily unscalable This thesis contends instead that distributed cycles of garbage are as likely to occur as local cycles and that a comprehensive alternative to graph tracing GGD is possible From the GGD perspective the combined effects of the application processes and local garbage collectors fulfill the role of a global mutator A subset of events of this global mutator's computation called log-keeping events reflect either the creation or the destruction of inter-site paths in the global object graph The causal history of a log-keeping event corresponds to the set of events responsible for the creation of all the paths ever created that are incident to an object The path history of this event is defined as a subset of its causal

history and contains only those events responsible for the creation of the extant paths to this object This dissertation presents a novel approach to comprehensive GGD that entails computing dependency vectors which characterize the path history of log keeping events that reflect the destruction of a path These dependency vectors can be computed by propagating increasingly accurate approximations of these vectors along the paths of the global object graph In effect this algorithm reacts to events that may result in the creation of garbage and identifies garbage without requiring a complete scan of the whole object graph In conjunction with a lazy log keeping mechanism it can therefore be shown to be both scalable and robust despite being comprehensive
