ML With Concurrency Design Analysis Implementation And Application:

ML with Concurrency Flemming Nielson, 2012-12-06 Both functional and concurrent programming are relatively new paradigms with great promise In this book a survey is provided of extensions to Standard ML one of the most widely used functional languages with new primitives for concurrent programming Computer scientists and graduate students will find this a valuable guide to this topic

Practical Aspects of Declarative Languages Manuel Hermenegildo, Daniel Cabeza, 2005-01-14 This book constitutes the refereed proceedings of the 7th International Symposium on Practical Aspects of Declarative Languages PADL 2005 held in Long Beach CA USA in January 2005 The 17 revised full papers presented together with the abstracts of 2 invited talks were carefully reviewed and selected from 36 submissions All current aspects of declarative programming are addressed including implementational issues and applications in areas such as database management active networks software engineering decision support systems and music composition

Frontiers of Combining Systems Bernhard Gramlich, 2005-09-14 This book constitutes the refereed proceedings of the 5th International Workshop on Frontiers of Combining Systems FroCoS 2005 held in Vienna Austria in September 2005 The 19 revised full papers presented including 2 system descriptions were carefully reviewed and selected from 28 submissions The papers are organized in topical sections on combinations of logics theories and decision procedures constraint solving and programming combination issues in rewriting and programming as well as in logical frameworks and theorem proving systems

Research Directions in Parallel Functional Programming Kevin Hammond, Greg Michaelson, 2012-12-06 Programming is hard Building a large program is like constructing a steam locomotive through a hole the size of a postage stamp An artefact that is the fruit of hundreds of person years is only ever seen by anyone through a LOO line window In some ways it is astonishing that such large systems work at all But parallel programming is much much harder There are so many more things to go wrong Debugging is a nightmare A bug that shows up on one run may never happen when you are looking for it but unfailingly returns as soon as your attention moves elsewhere A large fraction of the program s code can be made up of marshalling and coordination algorithms The core application can easily be obscured by a maze of plumbing Functional programming is a radical elegant high level attack on the programming problem Radical because it dramatically eschews side effects elegant because of its close connection with mathematics high level because you can say a lot in one line But functional programming is definitely not yet mainstream That s the trouble with radical approaches it s hard for them to break through and become mainstream But that doesn t make functional programming any less fun and it has turned out to be a wonderful laboratory for rich type systems automatic garbage collection object models and other stuff that has made the jump into the mainstream

Programming Languages and Systems Wei-Ngan Chin, 2004-10-19 On behalf of the organizing committee I would like to welcome you all to the second Asian Symposium on Programming Languages and Systems APLAS 2004 held in Taipei on November 4 6 2004 Since the year 2000 researchers in the area of programming

languages and systems have been meeting annually in Asia to present their most recent research results thus contributing to the advancement of this research area. The last four meetings were held in Singapore 2000, Daejeon 2001, Shanghai 2002, and Beijing 2003. These meetings were very fruitful and provided an excellent venue for the exchange of research ideas and experiences in programming languages and systems. APLAS 2004 is the fifth such meeting and the second one in symposium setting. The first symposium was held in Beijing last year. The success of the APLAS series is the collective result of many people's contributions. For APLAS 2004, I would like to thank all the members of the Program Committee, in particular the Program Chair Wei Ngan Chin, for their hard work in putting together an excellent program. I am most grateful to invited speakers Joxan Järar, Frank Pfenning, and Martin Odersky, who have traveled a long way to deliver their speeches at APLAS 2004. I would like to thank all the referees who helped review the manuscripts, the authors who contributed to the proceedings of APLAS 2004, the members of the Organizing Committee who made considerable effort to organize this event, and all the participants present at this meeting. Without your support, this symposium would not have been possible. Finally, I would like to acknowledge the support of the Asian Association for Foundation of Software and Academia Sinica, Taiwan.

Current Trends in Theoretical Computer Science Gheorghe Păun, Arto Salomaa, 2001. The scientific developments at the end of the past millennium were dominated by the huge increase and diversity of disciplines with the common label computer science. The theoretical foundations of such disciplines have become known as theoretical computer science. This book highlights some key issues of theoretical computer science as they seem to us now at the beginning of the new millennium. The text is based on columns and tutorials published in the Bulletin of the European Association for Theoretical Computer Science in the period 1995–2000. The columnists themselves selected the material they wanted for the book, and the editors had a chance to update their work. Indeed, much of the material presented here appears in a form quite different from the original. Since the presentation of most of the articles is reader friendly and does not presuppose much knowledge of the area, the book constitutes suitable supplementary reading material for various courses in computer science.

Computational Logic — CL 2000 John Lloyd, Veronica Dahl, Ulrich Furbach, Manfred Kerber, Kung-Kiu Lau, Catuscia Palamidessi, Luis M. Pereira, Yehoshua Sagiv, Peter J. Stuckey, 2003-06-26. These are the proceedings of the First International Conference on Computational Logic CL 2000, which was held at Imperial College in London from 24th to 28th July 2000. The theme of the conference covered all aspects of the theory, implementation, and application of computational logic, where computational logic is to be understood broadly as the use of logic in computer science. The conference was collocated with the following events: 6th International Conference on Rules and Objects in Databases DOOD 2000, 10th International Workshop on Logic-based Program Synthesis and Transformation LOPSTR 2000, 10th International Conference on Inductive Logic Programming ILP 2000. CL 2000 consisted of seven streams: Program Development, LOPSTR 2000, Logic Programming Theory and Extensions, Constraints, Automated Deduction, Putting Theory into Practice, Knowledge Representation, and Non-monotonic Reasoning. Database Systems DOOD

2000 Logic Programming Implementations and Applications The LOPSTR 2000 workshop constituted the program development stream and the DOOD 2000 conference constituted the database systems stream Each stream had its own chair and program committee which autonomously selected the papers in the area of the stream Overall 176 papers were submitted of which 86 were selected to be presented at the conference and appear in these proceedings The acceptance rate was uniform across the streams In addition LOPSTR 2000 accepted about 15 extended abstracts to be presented at the conference in the program development stream
