**Dynamic Mode Decomposition** J. Nathan Kutz, Steven L. Brunton, Bingni W. Brunton, Joshua L. Proctor, 2016-11-23 Data driven dynamical systems is a burgeoning field it connects how measurements of nonlinear dynamical systems and or complex systems can be used with well established methods in dynamical systems theory This is a critically important new direction because the governing equations of many problems under consideration by practitioners in various scientific fields are not typically known Thus using data alone to help derive in an optimal sense the best dynamical system representation of a given application allows for important new insights The recently developed dynamic mode decomposition DMD is an innovative tool for integrating data with dynamical systems theory The DMD has deep connections with traditional dynamical systems theory and many recent innovations in compressed sensing and machine learning Dynamic Mode Decomposition Data Driven Modeling of Complex Systems the first book to address the DMD algorithm presents a pedagogical and comprehensive approach to all aspects of DMD currently developed or under development blends theoretical development example codes and applications to showcase the theory and its many innovations and uses highlights the numerous innovations around the DMD algorithm and demonstrates its efficacy using example problems from engineering and the physical and biological sciences and provides extensive MATLAB code data for intuitive examples of key methods and graphical presentations

### **Fracture Mechanics of Metals,**

**Composites, Welds, and Bolted Joints** Bahram Farahmand, 2001 In the preliminary stage of designing new structural hardware to perform a given mission in a fluctuating load environment there are several factors that the designer should consider Trade studies for different design configurations should be performed and based on strength and weight considerations among others an optimum configuration selected The selected design must withstand the environment in question without failure Therefore a comprehensive structural analysis that consists of static dynamic fatigue and fracture is necessary to ensure the integrity of the structure Engineers must also consider the feasibility of fabricating the structural hardware in the material selection process During the past few decades fracture mechanics has become a necessary discipline for the solution of many structural problems in which the survivability of structure containing pre existing flaws is of great interest These problems include structural failures resulting from cracks that are inherent in the material or defects that are introduced in the part due to improper handling or rough machining that must be assessed through fracture mechanics concepts
