

OPEN DECISION FRAMEWORK

PHASE: LAUNCH

Steps you can take to be open

Begin with the end in mind

- Demonstrate alignment with Red Hat's strategy, mission, culture, and values
- Outline the steps you've taken to make this decision openly
- Highlight use of this framework
- Tell associates where to find detailed information
- Show how feedback shaped the decision or project
- Explain how to provide input after launch
- Acknowledge when you're not fully satisfied with the decision or know that others will not be
- Share your timeline or criteria for revisiting the decision
- Stay engaged with those who reject the decision

Default to open

- Reiterate relevant business requirements and constraints
- Share relevant legal, reporting, or confidentiality issues
- Communicate success criteria and publish relevant metrics

Contribute upstream

- Publish your methods, lessons learned, communications, and decision criteria to the archive, so others can review past decisions, learn why a decision was made, and see how leaders have responded to similar issues in the past
- Offer guidance to others on open decision making and choosing collaboration tools

Questions to ask

- How will we monitor mailing lists and other feedback channels after the launch?
- If we have done early releases, will we continue to make incremental improvements based on feedback?
- How willing are we to make revisions based on feedback?
- What's a reasonable window of time for additional input and refinement?
- Did we overlook something important? How do we address it?
- Does the decision need to be revisited?
- Did open decision-making lead to the desired outcomes (slide 5)?
- How can we share our lessons learned and encourage open decision-making at Red Hat?

Business Case Analysis with R Robert D. Brown III, 2018-03-01 This tutorial teaches you how to use the statistical programming language R to develop a business case simulation and analysis. It presents a methodology for conducting business case analysis that minimizes decision delay by focusing stakeholders on what matters most and suggests pathways for minimizing the risk in strategic and capital allocation decisions. Business case analysis often conducted in spreadsheets exposes decision makers to additional risks that arise just from the use of the spreadsheet environment. R has become one of the most widely used tools for reproducible quantitative analysis and analysts fluent in this language are in high demand. The R language traditionally used for statistical analysis provides a more explicit flexible and extensible environment than spreadsheets for conducting business case analysis. The main tutorial follows the case in which a chemical manufacturing company considers constructing a chemical reactor and production facility to bring a new compound to market. There are numerous uncertainties and risks involved including the possibility that a competitor brings a similar product online. The company must determine the value of making the decision to move forward and where they might prioritize their attention to make a more informed and robust decision. While the example used is a chemical company, the analysis structure it presents can be applied to just about any business decision from IT projects to new product development to commercial real estate. The supporting tutorials include the perspective of the founder of a professional service firm who wants to grow his business and a member of a strategic planning group in a biomedical device company who wants to know how much to budget in order to refine the quality of information about critical uncertainties that might affect the value of a chosen product development pathway. What You'll Learn: Set up a business case abstraction in an influence diagram to communicate the essence of the problem to other stakeholders. Model the inherent uncertainties in the problem with Monte Carlo simulation using the R language. Communicate the results graphically. Draw appropriate insights from the results. Develop creative decision strategies for thorough opportunity cost analysis. Calculate the value of information on critical uncertainties between competing decision strategies to set the budget for deeper data analysis. Construct appropriate information to satisfy the parameters for the Monte Carlo simulation when little or no empirical data are available. Who This Book Is For: Financial analysts, data practitioners, and risk business professionals also appropriate for graduate level finance, business, or data science students.
