**Hypertension and the Elderly** Robinetta Wheeler, 1985     *Managing Your Blood Pressure* Roth Riley, 2003-08-01

Description of Book for Internet Submission Hypertension can cause an individual to become seriously ill. Most often such persons result in early death. Hypertension kills. Medical doctors have known for years that this statement is true and exist among many persons. Yet presently there is no known cure concerning the dreadful and deadly disease. Accordingly, physicians manage the problems that Hypertension causes by prescribing appropriate medications for the duration of a patient's life. In fact conventional medical practices show that a person once diagnosed with high blood pressure remains classified in medical records as hypertensive and has to take medication to feel better and to survive each day for a lifetime. The cost over time for high blood pressure medicine could become an astronomical burden in a person's life. However, do patients find relief by continuously taking medication for the treatment of high blood pressure and related symptoms? Absolutely. Despite the fact that doctors have discovered that not all patients who suffer with Hypertension need prescriptive medication to manage their pressure, many doctors continue to write prescriptions for the management of Hypertension. So, what is the alternative treatment to managing Hypertension? The alternative treatment to managing Hypertension is healthful food. However, logically, if food is an alternative approach to managing high blood pressure, why do millions of Americans manage Hypertension with medication? Or, if indigenous and cannot afford the high price of the medicine, individuals remain ill and will result in early death. In addition, many doctors choose the procedure of writing a prescription for patients to treat Hypertension for primarily two reasons: first, medical schools train doctors to treat Hypertension with medication. This is due to the fact that until recently a test was not available to distinguish between which patient could manage Hypertension with food and which patient would require medication. Secondly, most doctors know that blood pressure medicine will control Hypertension. While the author of this book has yet to discover a cure to eliminate Hypertension, the author has skillfully developed an accurate tool to assess appropriate management of hypertension. The goal of *Managing Your High Blood Pressure* Food or Medicine Seven Easy Steps to Know for Sure is designed to offer step by step in-home test instructions to persons with Hypertension, commonly known as High Blood Pressure, the Silent Killer. Faced with the growing need to provide a more precise way to manage Hypertension and the fact that a test was NOT available to assess accurate treatment plans, Family Physician Roth L. Riley M.D. discovered a way to clinically test whether a person with Hypertension could manage their blood pressure by diet alone. The clinical name of the assessment test is known as the R. L. Riley Hypertension Sensitivity Test. If you are Hypertensive, the information that you will discover at the end of the test period could save thousands of dollars whether you are food or medication tolerant. Based on 20 years of research completion of this test would provide useful information that could also assist your medical doctor in planning an extremely accurate treatment plan for you as a

hypertensive patient It is important to know that while all doctors tend to be highly trained to practice medicine and meet difficult standards of quality healthcare not all doctors trained can effectively treat Hypertension Therefore if you have a family history of high blood pressure or believe that you may have Hypertension The R L Riley Hypertensive Sensitivity Test could accurately guide you to the best Hypertension management plan for your life
