Managing Your Software Project Ian Ricketts, 2012-12-06 About this Book I wrote this book to help students who are about to start their first project It provides guidance on how to organise your work so that you achieve your agreed objective The advice is based on experience gained from supervising more than 50 successful student projects in both engineering and computer science during the last 10 years Projects have varied in duration from 120 hour final year undergraduate projects through 800 hour MSc projects and up to 5000 hour PhD student research projects It is my experience that almost all students have the technical background to a greater or lesser extent to complete their assigned project but that a disappointingly large number lack the basic organisational framework Once they are introduced to the rudiments of project management then they are better equipped to control their own progress They can also concentrate their efforts more effectively on the technical challenges which they will inevitably meet Of course you can improve your skills solely on the basis of personal experience but you are more likely to achieve your objectives in a timely manner with the help of an experienced guide That is what I have tried to include within this book It contains advice on how to solve some of the organisational challenges common to all projects so that you can successfully complete your project *Software Project Management in a Changing World* Günther Ruhe, Claes Wohlin, 2014-09-04 By bringing together various current directions Software Project Management in a Changing World focuses on how people and organizations can make their processes more change adaptive The selected chapters closely correspond to the project management knowledge areas introduced by the Project Management Body of Knowledge including its extension for managing software projects The contributions are grouped into four parts preceded by a general introduction Part I Fundamentals provides in depth insights into fundamental topics including resource allocation cost estimation and risk management Part II Supporting Areas presents recent experiences and results related to the management of quality systems knowledge product portfolios and global and virtual software teams Part III New Paradigms details new and evolving software development practices including agile distributed and open and inner source development Finally Part IV Emerging Techniques introduces search based techniques social media software process simulation and the efficient use of empirical data and their effects on software management practices This book will attract readers from both academia and practice with its excellent balance between new findings and

experience of their usage in new contexts Whenever appropriate the presentation is based on evidence from empirical evaluation of the proposed approaches For researchers and graduate students it presents some of the latest methods and techniques to accommodate new challenges facing the discipline For professionals it serves as a source of inspiration for refining their project management skills in new areas
