## **Manmade Climate Change:**

**Climate Confusion** Roy W. Spencer, 2008 Spencer shows that fears about global warming are vastly exaggerated and are driven by politics not truth. This book combines impeccable scientific authority with great wit to expose the hysteria surrounding the myths of global warming and climate change. The Impacts of Climate Change on America's National Parks United States. Congress. House. Committee on Natural Resources. Subcommittee on National Parks, Forests, and Public Lands (2007- ), 2009 Senators' Perspectives on Global Warming United States. Congress. Senate. Committee on Environment and Public Works, 2007 **What We Know About Climate Change** Kerry Emanuel, 2007-08-31 An introduction to the scientific consensus on the human role in global warming. The vast majority of scientists agree that human activity has significantly increased greenhouse gases in the atmosphere most dramatically since the 1970s. In February 2007 the Intergovernmental Panel on Climate Change found that global warming is unequivocal and that human produced carbon dioxide and other greenhouse gases are chiefly to blame to a certainty of more than 90 percent. Yet global warming skeptics and ill informed elected officials continue to dismiss this broad scientific consensus. In **What We Know About Climate Change** MIT atmospheric scientist Kerry Emanuel outlines the basic science of global warming and how the current consensus has emerged. Although it is impossible to predict exactly when the most dramatic effects of global warming will be felt he argues we can be confident that we face real dangers. Emanuel whose work was widely cited in media coverage of Hurricane Katrina warns that global warming will contribute to an increase in the intensity and power of hurricanes and flooding and more rapidly advancing deserts. But just as our actions have created the looming crisis so too might they avert it. Emanuel calls for urgent action to reduce greenhouse gases and criticizes the media for playing down the dangers of global warming and in search of balance quoting extremists who deny its existence. An afterword by environmental policy experts Judith Layzer and William Moomaw discusses how the United States could lead the way in the policy changes required to deal with global warming. *Attitudes towards Climate Change and the Willingness to Take Action* Maren Weiß, 2021-11-09 Seminar paper from the year 2020 in the subject Politics Environmental Policy grade 10 University of Bamberg language English abstract. This research paper deals with the current issue of the global climate crisis and the personal responsibility to act against it. Theoretically it is based on the combination of the paradox of voting and the collective action problem which are adapted to the topic of the climate crisis. Within the seminar paper four assumptions about knowledge the perception of urgency responsibility and the willingness to take action are developed which ought to solve the assumed free rider problem within the climate crisis. Background for the discussion delivers a qualitative content analysis based on Mayring 2015 and Kuckartz 2016. Five qualitative interviews with master students of political science of the University of Bamberg were conducted with the help of an open guideline. The interviews were coded through the computer aided program MAXQDA. **Global Environmental Change Research** United States. Congress. Senate. Committee on Commerce, Science, and Transportation.
