volume production e.g. bioactive substances, viruses for vaccines and gene therapies etc. They suggest that such disposable bioreactors, typically characterized by the cultivation chamber or bag from plastic materials, may be advantageous for plant, animal and microbial cells. Running industrial activities such as CFD modelling, development of single-use process monitoring and control technology and standardized film formulations are attempting to resolve the limitations of the current disposable bioreactors. These achievements, along with substantial improvements in product yield, will reduce the use of stainless steel in the biomanufacturing facilities of the future.
