Wolfgang Knoll, Martin Hechinger

Model Buildings:

Model Buildings and how to Make Them Harvey Weiss, 1979 Includes instructions for making model buildings using cardboard and wood

Architectural Models Wolfgang Knoll, Martin Hechinger, 2007-12-15 Architects models serve as bridge between an idea and its realization Models are one of the three means by which an architect invents and develops his design sketch model computer model No other representational form is as effective in enabling the viewer to perceive the spaces shapes surfaces and textures created by the architect s design it is therefore a prerequisite in the design process Architectural Models provides clear and comprehensible instruction explaining how design ideas can be skillfully translated into models Some 200 black and white illustrations and new to this edition more than 40 extraordinary full color photographs provide a comprehensive visual explication of the text In this completely revised edition the authors convey practical basics and offer a wealth of innovative and valuable suggestions for students of architecture or graphic arts as well as for experienced architectural model makers

Making Model Railway Buildings Andy McMillan, 2014-04-30 This invaluable book is essential reading for all railway modellers whatever their level of expertise The author provides an overall understanding of the purpose of making buildings for a model railway and covers their construction their positioning and how to light them Topics covered include railway and non railway buildings explaining how the latter can also enhance your trains modelling attitudes the use of scale levels of detail and both regional vernacular and railway architecture ready made buildings and how you can adapt them to your own particular purposes different materials available for building structures and ways of choosing finding measuring and recording suitable prototypes step by step construction of a cardboard building kit to illustrate the use of basic modelling tools and to explain essential procedures and techniques using and modifying out of the box model buildings Also explores the subtleties of making model railway buildings from scratch without the use of a kit or anything more than hand tools and a few sheets of suitable material giving guidance on the appropriate use of texture and colour and shows how walls doors windows roofs and chimneys can be created painted detailed and finished off Discusses the many aspects of lighting including external lighting such as street and platform lights and the internal lighting of buildings the problems they pose and how they can be resolved Lighting can create dramatic effects with reference for example to the installation of illuminated ground signals in N gauge using the latest surface mount technology and by producing brilliantly illuminated back lit sunsets Superbly illustrated with 622 colour photographs

Performance of Innovative Controlled Buildings Under Resonant and Critical Earthquake Ground Motions Izuru Takewaki, 2018-11-23 This eBook is the fourth in a series of books on the critical earthquake response of elastic or elastic plastic structures under near fault or long duration ground motions and includes six original research papers which were published in the specialty section Earthquake Engineering in Frontiers in Built Environment Several extensions of the first eBook the second eBook and the third eBook are included here The first article is on the comparison of earthquake resilience

of various building structures including innovative base isolation systems and control systems Pulse type ground motions and resonant harmonic ground motions are used for investigating the earthquake resilience of those innovative building structures The second article is concerned with the performance of an innovative seismic response controlled system with shear walls and concentrated dampers in lower stories The resonant one cycle sine waves and resonant harmonic waves are used as the input ground motions The third article is related to the robustness evaluation of a base isolation building connection hybrid controlled building structure under the critical long period and long duration ground motion The multi impulse is used as a substitute for a long period and long duration ground motion and the model reduction to a single degree of freedom SDOF system is conducted to propose a simple response evaluation method The fourth article is an extension of the previously proposed energy balance approach to a damped bilinear hysteretic SDOF system under a double impulse as a substitute for a near fault ground motion The energy absorption through viscous damping is incorporated appropriately in the energy balance and the application of the proposed method to actual recorded ground motions is presented The fifth article is on the robustness evaluation of base isolation building connection hybrid controlled building structures considering uncertainties in deep ground The earthquake ground motion amplitude at the earthquake bedrock is evaluated by the Boore's stochastic method in 1983 including the fault rupture and the wave propagation into the earthquake bedrock Then the phase angle property at the earthquake bedrock is investigated by introducing the concept of phase difference which is defined for each earthquake type A wave at the ground surface nearly resonant to the base isolation building connection hybrid controlled building structure is produced by considering uncertainties in deep ground The sixth article is concerned with the critical response of nonlinear base isolated buildings considering soil structure interaction under a double impulse as a substitute for a near fault ground motion The complicated model of a nonlinear base isolated building on ground is modeled into an SDOF system after a few model reduction processes The approach presented in this eBook together with the previous eBooks is an epoch making accomplishment to open the door for simpler and deeper understanding of structural reliability and resilience of built environments in the elastic plastic and nonlinear range
