## **Model Categories And Their Localizations:**

**Model Categories and Their Localizations** Philip S. Hirschhorn, 2003 The aim of this book is to explain modern homotopy theory in a manner accessible to graduate students yet structured so that experts can skip over numerous linear developments to quickly reach the topics of their interest Homotopy theory arises from choosing a class of maps called weak equivalences and then passing to the homotopy category by localizing with respect to the weak equivalences i e by creating a new category in which the weak equivalences are isomorphisms Quillen defined a model category to be a category together with a class of weak equivalences and additional structure useful for describing the homotopy category in terms of the original category This allows you to make constructions analogous to those used to study the homotopy theory of topological spaces A model category has a class of maps called weak equivalences plus two other classes of maps called cofibrations and fibrations Quillen's axioms ensure that the homotopy category exists and that the cofibrations and fibrations have extension and lifting properties similar to those of cofibration and fibration maps of topological spaces During the past several decades the language of model categories has become standard in many areas of algebraic topology and it is increasingly being used in other fields where homotopy theoretic ideas are becoming important including modern algebraic K theory and algebraic geometry All these subjects and more are discussed in the book beginning with the basic definitions and giving complete arguments in order to make the motivations and proofs accessible to the novice The book is intended for graduate students and research mathematicians working in homotopy theory and related areas

### **Model Categories & Their Localizations**

Philip Steven Hirschhorn, 2014-05-21 [An Alpine Anthology of Homotopy Theory](#) Dominique Arlettaz, Kathryn Hess, 2006 The second Arolla conference on algebraic topology brought together specialists covering a wide range of homotopy theory and K theory These proceedings reflect both the variety of talks given at the conference and the diversity of promising research directions in homotopy theory The articles contained in this volume include significant contributions to classical unstable homotopy theory model category theory equivariant homotopy theory and the homotopy theory of fusion systems as well as to K theory of both local fields and C algebras

*Noncommutative Localization in Algebra and Topology* Andrew Ranicki, 2006-02-09 Noncommutative localization is a powerful algebraic technique for constructing new rings by inverting elements matrices and more generally morphisms of modules Originally conceived by algebraists notably P M Cohn it is now an important tool not only in pure algebra but also in the topology of non simply connected spaces algebraic geometry and noncommutative geometry This volume consists of 9 articles on noncommutative localization in algebra and topology by J A Beachy P M Cohn W G Dwyer P A Linnell A Neeman A A Ranicki H Reich D Sheiham and Z Skoda The articles include basic definitions surveys historical background and applications as well as presenting new results The book is an introduction to the subject an account of the state of the art and also provides many references for further material It is suitable for graduate students and more advanced researchers in both algebra and topology

### **Cartesian Cubical Model Categories**

Steve Awodey, 2026-02-03 This book introduces the category of Cartesian cubical sets and endows it with a Quillen model structure using ideas coming from Homotopy type theory In particular recent constructions of cubical systems of univalent type theory are used to determine abstract homotopical semantics of type theory The celebrated univalence axiom of Voevodsky plays a key role in establishing the basic laws of a model structure showing that the homotopical interpretation of constructive type theory is not merely possible but in a certain precise sense also necessary for the validity of univalence Fully rigorous proofs are given in diagrammatic style using the language and methods of categorical logic and topos theory The intended readers are researchers and graduate students in homotopy theory type theory and category theory

**Bousfield Classes and Ohkawa's Theorem** Takeo Ohsawa, Norihiko Minami, 2020-03-18 This volume originated in the workshop held at Nagoya University August 28-30 2015 focusing on the surprising and mysterious Ohkawa's theorem the Bousfield classes in the stable homotopy category  $SH$  form a set An inspiring extensive mathematical story can be narrated starting with Ohkawa's theorem evolving naturally with a chain of motivational questions Ohkawa's theorem states that the Bousfield classes of the stable homotopy category  $SH$  surprisingly forms a set which is still very mysterious Are there any toy models where analogous Bousfield classes form a set with a clear meaning The fundamental theorem of Hopkins Neeman Thomason and others states that the analogue of the Bousfield classes in the derived category of quasi-coherent sheaves  $D_{qc} X$  form a set with a clear algebro-geometric description However Hopkins was actually motivated not by Ohkawa's theorem but by his own theorem with Smith in the triangulated subcategory  $SH_c$  consisting of compact objects in  $SH$  Now the following questions naturally occur 1 Having theorems of Ohkawa and Hopkins-Smith in  $SH$  are there analogues for the Morel-Voevodsky  $A_1$  stable homotopy category  $SH_k$  which subsumes  $SH$  when  $k$  is a subfield of  $\mathbb{C}$  2 Was it not natural for Hopkins to have considered  $D_{qc} X_c$  instead of  $D_{qc} X$  However whereas there is a conceptually simple algebro-geometrical interpretation  $D_{qc} X_c \simeq D_{perf} X$  it is its close relative  $D_{bcoh} X$  that traditionally ever since Oka and Cartan has been intensively studied because of its rich geometric and physical information This book contains developments for the rest of the story and much more including the chromatic homotopy theory which the Hopkins-Smith theorem is based upon and applications of Lurie's higher algebra all by distinguished contributors

*An Alpine Bouquet of Algebraic Topology* Jérôme Scherer, 2018-05-30 This volume contains the proceedings of the Alpine Algebraic and Applied Topology Conference held from August 15-21 2016 in Saas-Almagell Switzerland The papers cover a broad range of topics in modern algebraic topology including the theory of highly structured ring spectra infinity categories and Segal spaces equivariant homotopy theory algebraic theory and topological cyclic periodic or Hochschild homology intersection cohomology and symplectic topology
