

Mixing solids & liquids

When we mix solids and liquids together a lot can happen depending on:

1. the different **quantities** of each;
2. whether the solid is **able to dissolve** in the liquid;
3. the **properties** of each material.

Mixing Of Solids:

Mixing of Solids Ralf Weinekötter, H. Gericke, 2013-03-09 This book covers the theoretical and practical aspects of the mixing of solids and presents an overview as well as detailed know how and experience. The book demonstrates the state of the art of mixing and segregation technology, quality control design of mixers, design scale up and engineering of complete processes. Includes checklists, criteria for choosing batch or continuous process and practical examples of installed systems.

Mixing of Solids, 1970 **Food Mixing** P. J. Cullen, 2009-07-21 The mixing of liquids, solids and gases is one of the most common unit operations in the food industry. Mixing increases the homogeneity of a system by reducing non uniformity or gradients in composition, properties or temperature. Secondary objectives of mixing include control of rates of heat and mass transfer, reactions and structural changes. In food processing applications, additional mixing challenges include sanitary design, complex rheology, desire for continuous processing and the effects of mixing on final product texture and sensory profiles. Mixing ensures delivery of a product with constant properties. For example, consumers expect all containers of soups, breakfast cereals, fruit mixes, etc. to contain the same amount of each ingredient. If mixing fails to achieve the required product yield, quality, organoleptic or functional attributes, production costs may increase significantly. This volume brings together essential information on the principles and applications of mixing within food processing. While there are a number of creditable references covering general mixing, such publications tend to be aimed at the chemical industry and so topics specific to food applications are often neglected. Chapters address the underlying principles of mixing, equipment design, novel monitoring techniques and the numerical techniques available to advance the scientific understanding of food mixing. Food mixing applications are described in detail. The book will be useful for engineers and scientists who need to specify and select mixing equipment for specific processing applications and will assist with the identification and solving of the wide range of mixing problems that occur in the food, pharmaceutical and bioprocessing industries. It will also be of interest to those who teach, study and research food science and food engineering.

Mixing of Solids in a Fluidized Bed Gordon Faulkner, Palm, 1949 **Mixing for the Process Industries** R. McDonough, 2014-01-14 This book is written primarily for an audience of engineers who design, specify, procure, update and maintain mixers in the processing industries. It is an application oriented handbook to support the design and operation of mixers for liquids, liquids and solids, liquids and gases and any combination thereof. This book does not address solids mixing. Mixing applications are identified as either flow controlling or shear rate controlling and are addressed as such. Specific mixing applications and design parameters are presented for blending, solid suspension, heat transfer, mass transfer, dispersions, extractions, etc. Fundamentals of mixer design and operation, agitation applications, specific, true, types and geometries of mixing impellers, etc. are presented in Chapter 1, providing the basis for practical information presented in subsequent chapters. Flow controlled mixing applications are discussed in Chapter 2. These include blending, solid suspension, heat transfer, dissolving of solids and crystallization. Optimization of

mixer design is emphasized with an eye to saving power and capital cost. Also discussed is the use of draft tube circulator mixers to optimize mixer performance and cost. Shear controlled mixing applications are addressed in Chapter 3. These include gas liquid dispersions, mass transfer, fermentation, emulsions, extractions, and dispersions of solids in liquids. Chapter 4 focuses on geometric and nongeometric scaleup of mixers to accomplish equal or better mixing results in various scales of volume. Scaleup relevant to applications of blending, solids suspension, and mass and heat transfer is explained.
