Optoelectronics For Environmental Science:

Optoelectronics for Environmental Science Arthur N. Chester, S. Martellucci, 2013-03-08 As we enter the nineties there is worldwide awareness that the future of all mankind is inexorably linked by the world we share and its response to man's activities. Lasers and the optical sciences have brought powerful tools to measure and understand our environment. LIDAR, laser radar and laser fluorescence allow us to measure atmospheric and oceanic pollutants as well as industrial emissions from many kilometers distance. And a variety of sensitive laser based spectroscopic techniques permit the accurate analysis of heavy metals and other trace elements in the environment. In September 1989 an international group of scientists met in Erice, Sicily for the 14th Course of the International School of Quant Electronics. This Course was devoted to Optoelectronics for Environmental Science and was ably directed by Prof V S Letokhov of the USSR Institute of Spectroscopy and Prof A M Scheggi of the C N R Electromagnetic Waves Institute Florence Italy. This book gives the proceedings of that conference which covered not only basic tutorial papers but also reports on the latest research results. The first half of this volume describes the techniques used for direct In Situ Measurements of the environment. In Techniques and Programs four chapters and one extended abstract give tutorial discussions of the most important remote sensing techniques: LIDAR, laser fluorescence and optical fiber sensors plus a description of the Italian program in this area.
