**Stochastic Global Optimization** Anatoly Zhigljavsky, Antanas Zilinskas, 2007-11-20 This book aims to cover major methodological and theoretical developments in the field of stochastic global optimization This field includes global random search and methods based on probabilistic assumptions about the objective function We discuss the basic ideas lying behind the main algorithmic schemes formulate the most essential algorithms and outline the ways of their theoretical investigation We try to be mathematically precise and sound but at the same time we do not often delve deep into the mathematical detail referring instead to the corresponding literature We often do not consider the most general assumptions preferring instead simplicity of arguments For example we only consider continuous finite dimensional optimization despite the fact that some of the methods can easily be modified for discrete or in finite dimensional optimization problems The authors' interests and the availability of good surveys on particular topics have influenced the choice of material in the book For example there are excellent surveys on simulated annealing both on theoretical and implementation aspects of this method and evolutionary algorithms including genetic algorithms We thus devote much less attention to these topics than they merit concentrating instead on the issues which are not that well documented in literature We also spend more time discussing the most recent ideas which have been proposed in the last few years
