**Objective Becoming** Bradford Skow, 2015 Bradford Skow presents an original defense of the block universe theory of time often said to be a theory according to which time does not pass. Along the way he provides in depth discussions of alternative theories of time including those in which there is robust passage of time or objective becoming. Presentism, the moving spotlight theory of time, the growing block theory of time and the branching time theory of time. Skow explains why the moving spotlight theory is the best of these arguments and rebuts several popular arguments against the thesis that time passes. He surveys the problems that the special theory of relativity has been thought to raise for objective becoming and suggests ways in which fans of objective becoming may reconcile their view with relativistic physics. The last third of the book aims to clarify and evaluate the argument that we should believe that time passes because somehow the passage of time is given to us in experience. He isolates three separate arguments this idea suggests and explains why they fail.

Ziegler, 2013-06-29 The mathematical heroes of this book are perfect proofs, brilliant ideas, clever connections and wonderful observations that bring new insight and surprising perspectives on basic and challenging problems from Number Theory, Geometry, Analysis, Combinatorics and Graph Theory. Thirty beautiful examples are presented here. They are candidates for The Book in which God records the perfect proofs according to the late Paul Erdős who himself suggested many of the topics in this collection. The result is a book which will be fun for everybody with an interest in mathematics requiring only a very modest undergraduate mathematical background.
