Neal, Helen Youngelson-Neal, 2014-05-23 What values do Americans hold dear What happens when real world situations cause those values to conflict To better understand the intellectual map of how American society works Arthur G Neal and Helen Youngelson Neal analyze values prominent in American word and deed These values appear in our nation s formal documents rights and privileges prominently emphasized in the US Constitution and inscribed on the Statue of Liberty They have shaped the historical destiny and indeed include those values most extensively propagated by the general population Using these criteria the authors identify

individualism the pursuit of happiness freedom consumerism materialism equality of opportunity technology mastery of the environment quality of marriage and national unity as the core American values Core values provide the raw materials for the construction of contemporary society as a moral community wherever that community is located Such values are clusters of ideas that are central to self identities they generate a sense of collective belonging and membership As such core values define the existing social order and advance a set of ideas for depicting a desirable future The analysis presented here helps us understand contemporary conflicts inherent in the American value system and the problems confronted by Americans as they try to live within the limitations and contradictions of value systems **Political Analysis** John R. cycle Papers contribution to this Research Topic will cover a wide range of ecosystems However special relevance will be given to Mediterranean type areas These involve coastal regions of four continents making Mediterranean type ecosystems extremely interesting for investigating the potential impacts of global change on growth and for studying responses of woody plants under extreme environmental conditions For example the ongoing trend towards warmer temperatures and reduced precipitation can increase the susceptibility to fire and pests The EU funded COST Action STREeSS Studying Tree Responses to extreme Events a SynthesiS addresses such crucial tree biological and forest ecological issues by providing a collection of important methodological and scientific insights about the current state of knowledge and by opinions for future research needs
