**New Organic Architecture** David Pearson, 2001 New Organic Architecture is a manifesto for building in a way that is both aesthetically pleasing and kinder to the environment It illuminates key themes of organic architects their sources of inspiration the roots and concepts behind the style and the environmental challenges to be met The organic approach to architecture has an illustrious history from Celtic design Art Nouveau Arts and Crafts to the work of Antoni Gaud and Frank Lloyd Wright Today there is a response to a new age of information and ecology architects are seeking to change the relationship between buildings and the natural environment In the first part of his book David Pearson provides a history and assessment of organic architecture The second part comprises statements from thirty architects from around the world whose work is based on natural or curvilinear forms rather than the straight line geometrics of modernism Each statement is accompanied by full color illustrations of one or several of the architects built projects

**Organic Design in Twentieth-Century Nordic Architecture** Erik Champion, 2019-02-18 Organic Design in Twentieth Century Nordic Architecture presents a communicable and useful definition of organic architecture that reaches beyond constraints The book focuses on the works and writings of architects in Nordic countries such as Sigurd Lewerentz J rn Utzon Sverre Fehn and the Aaltos Aino Elissa and Alvar among others It is structured around the ideas of organic design principles that influenced them and allowed their work to evolve from one building to another Erik Champion argues organic architecture can be viewed as a concerted attempt to thematically unify the built environment through the allegorical expression of ongoing interaction between designer architectural brief and building as process With over 140 black and white images this book is an intriguing read for architecture students and professionals alike

**Contemporary Perspectives on Architectural Organicism** Gary Huafan He, Skender Luarasi, 2023-06-07 This project is born out of similar questions and discussions on the topic of organicism emergent from two critical strands regarding the discourse of organic self generation one dealing with the problem of stopping in the design processes in history and the other with the organic legacy of style in the nineteenth century as a preeminent form of aesthetic ideology The epistemologies of self generation outlined by enlightenment and critical philosophy provided the model for the discursive formations of modern urban planning and architecture The form of the organism was thought to calibrate modernism's infinite extension The architectural organicism of today does not take on the language of the biological sciences as they did in the nineteenth and twentieth

centuries but rather the image of complex systems be they computational informational geo ecological or even ontological aesthetic networks What is retained from the modernity of yesterday is the ideology of endless self generation Revisiting such a topic feels relevant now in a time when the idea of endless generation is rendered more suspect than ever amid an ever increasing speed and complexity of artificial intelligence AI networks The essays collected in this book offer a variety of critiques of the modernist idea of endless growth in the fields of architecture literature philosophy and the history of science They range in scope from theoretical and speculative to analytic and critical and from studies of the history of modernity to reflections of our contemporary world Far from advocating a return to the romantic forms of nineteenth century naturphilosophie this project focuses on probing organicism for new forms of critique and emergent subjectivities in a contemporary post pandemic constellation of neo naturalism in design climate change complex systems and information networks This book will be of interest to a broad range of researchers and professionals in architecture and art history historians of science visual artists and scholars in the humanities more generally
