Organisms Artifacts Design In Nature:

Organisms and Artifacts Tim Lewens,2004 An investigation of the analogy between evolutionaryprocesses and the processes of intelligent design used in thelanguage of modern biology **Functions: From Organisms to Artefacts** Jean Gayon,Armand de Ricqlès,Antoine C. Dussault,2023-07-25 This book originally published in French examines the philosophical debates on functions over the last forty years and proposes new ways of analysis Pervasive throughout the life sciences the concept of function has the air of an epistemological scandal ascribing a function to a biological structure or process amounts to suggesting that it is explained by its effects This book confronts the debates on function with the use of the notion in a wide range of disciplines such as biology psychology and medicine It also raises the question of whether this notion which is as old in the history of technology as it is in the life sciences has the same meaning in these two domains

Invention and Evolution Michael French,1994-09-15 This textbook provides an introduction to design for function using many examples of manufactured artifacts and living organisms to demonstrate common themes and fundamental principles Examples forcefully illustrate the importance of the basic design principles related to material properties physical principles and energy expenditure The author also discusses the relation of aesthetic and functional design the crucial connection of design to production in artifacts and reproduction in organisms The author has thoroughly updated this second edition with more examples and a new chapter with actual design case studies to illustrate key ideas In addition the text contains many new exercises that reinforce important points in the text Life, Organisms, and Human Nature Luca Corti,Johannes-Georg Schülein,2023-11-09 This collection of essays investigates the notions of life living organisms and human nature in Classical German Philosophy from a historical and conceptual perspective Its 19 chapters move from the peculiarities of organic life to the peculiarities of the distinctly human life form and discuss the strengths and weaknesses of naturalistic accounts of life In light of the growing interest in nature within current philosophical debates the book provides an overview of what the philosophical epoch of Kant Fichte Schelling Humboldt the Romantics Hegel and others can contribute to our understanding of life today The collection of essays represents a plurality of approaches that reflects the pluralism of the tradition itself highlighting the liveliness and polyphonic nature of the issues at stake and the ways in which they were approached in post Kantian thought In combining historical and philosophical investigation the collection constitutes a unique resource for scholars and graduate students working in various areas related to the study of nature in philosophy contemporary theories of science and the humanities more generally **Understanding Evolution** Kostas Kampourakis,2014-04-03 Bringing together conceptual obstacles and core concepts of evolutionary theory this book presents evolution as straightforward and intuitive **Signs in the Dust** Nathan Lyons,2019-02-28 Modern thought is characterized by a dichotomy of meaningful culture and unmeaning nature Signs in the Dust uses medieval semiotics to develop a new theory of nature and culture that resists this familiar picture of things Through readings of Thomas Aquinas Nicholas of Cusa

and John Poinsot John of St Thomas it offers a semiotic analysis of human culture in both its anthropological breadth as an enterprise of creaturely sign making and its theological height as a finite participation in the Trinity which can be understood as an absolute cultural nature Signs in the Dust then extends this account of human culture backwards into the natural depth of biological and physical nature It puts the biosemiotics of its medieval sources along with Félix Ravaisson's philosophy of habit into dialogue with the Extended Evolutionary Synthesis that is emerging in contemporary biology to show how all living things participate in semiosis so that a cultural dimension is present through the whole order of nature and the whole of natural history It also retrieves Aquinas' doctrine of intentions in the medium to show how signification can be attributed in a diminished way to even inanimate nature with the ontological implication that being as such should be reconceived in semiotic terms The phenomena of human culture are therefore to be understood not as breaks with a meaningless nature but instead as heightenings and deepenings of natural movements of meaning that long precede and far exceed us Against the modern divorce of nature and culture Signs in the Dust argues that culture is natural and nature is cultural through and through **Kant's System of Nature and Freedom** Paul Guyer, 2005-04-21 The governing theme of this volume is the role of systematicity in Kant's theoretical and practical philosophy Kant's System of Nature and Freedom will be essential for anyone working on the history of modern philosophy and related areas of ethics, philosophy of science and metaphysics

Incomplete Nature: How Mind Emerged from Matter Terrence W. Deacon, 2012 As scientists study the minutiae of subatomic particles, neural connections and molecular compounds their attempts at a theory of everything harbor a glaring omission they still cannot explain us the thoughts and perceptions that truly make us what we are A masterwork that brings together science and philosophy Incomplete Nature offers a revolutionary, captivating account of how life and consciousness emerged revealing how our desires, feelings and intentions can be understood in terms of the physical world **The Native Mind and the Cultural Construction of Nature** Scott Atran, Douglas L. Medin, 2008 An analysis of the cognitive consequences of diminished contact with nature examines the relationship between how people think about the natural world and how they act on it and how these are affected by cultural differences History and Philosophy of the Life Sciences, 2006

The Philosophy of Biology Kostas Kampourakis, 2013-06-18 This book brings together for the first time philosophers of biology to write about some of the most central concepts and issues in their field from the perspective of biology education The chapters of the book cover a variety of topics ranging from traditional ones such as biological explanation, biology and religion or biology and ethics to contemporary ones such as genomics, systems biology or evolutionary developmental biology Each of the 30 chapters covers the respective philosophical literature in detail and makes specific suggestions for biology education The aim of this book is to inform biology educators, undergraduate and graduate students in biology and related fields, students in teacher training programs and curriculum developers about the current state of discussion on the major topics in the philosophy of biology and its implications for teaching biology In addition the

book can be valuable to philosophers of biology as an introductory text in undergraduate and graduate courses **Artifacts and Artificial Science** Bo Dahlbom,Svante Beckman,Göran B. Nilsson,2002 In three essays examine the idea of an artificial science the nature of artifacts our artificial world and the example of history as an artificial science **Midwest Studies in Philosophy** ,1976 Use and Adaptation of Precedents in Architectural Design Karina Moraes Zarzar,2003 This is a Ph D thesis For centuries architects have used design precedents in the conception of new design solutions Whether explicitly as in the case of Le Corbusier James Stirling and Jo Coenen or implicitly as with J J P Oud Aldo van Eyk **Design with Nature** Ian L. McHarg,1969 Proceedings and Addresses of the American Philosophical Association American Philosophical Association,2004 List of members in v 1 **Humanity's End** Nicholas Agar,2010 Nicholas Agar has written an excellent introduction to the moral challenges of our transition to a posthuman future engagingly told by contrasting the work of four very different transhumanists Humanity's End joins Agar's Liberal Eugenics on the must read list for those interested in the future of the human race James J Hughes Executive Director Institute for Ethics and Emerging Technologies **The Philosophical Review** Jacob Gould Schurman,James Edwin Creighton,Frank Thilly,Gustavus Watts Cunningham,2004 **Phenomenological Inquiry** ,2009 *Technology and Social Action* Carl Mitcham,1997 This volume provides an analysis of the relationships between technology and social action with particular reference to environmental ethics feminism labour and social work It includes a review of the literature on women and technology
