The Jade Garden is an authoritative guide to 130 of the most fascinating yet little known ornamental trees, shrubs and perennials from the green mantle of Asia. Based on detailed research and observation at one of the largest and oldest collections of Asian plants in North America, the subjects of this book were chosen for their superior garden qualities, their rarity in everyday horticulture and their commercial availability. From an extraordinary nearly black geranium with reflexed petals to a ground creeping honeysuckle with bicolored flowers and blue berries, gardeners are sure to find something new and exciting in these pages. Although plants included are from the cutting edge of plant exploration and discovery, the authors have included only those selections that have undergone thorough evaluation at the University of British Columbia Botanical Garden for hardiness and garden appeal. In addition, the authors have taken special care to exclude potentially invasive plants, allowing readers to be confident that any selection from the book will be an environmentally responsible one. With many of its plants appearing in a garden book for the first time, *The Jade Garden* is certain to be a groundbreaking horticultural event. Newsletter, 1995. Aquatic Protected Areas - What Works Best and How Do We Know? J. P. Beumer, Ann Grant, 2003. These proceedings of the inaugural World Congress on Aquatic Protected Areas are structured around the following 5 themes: Who and what are the beneficiaries of aquatic protected areas; the design and selection of aquatic protected areas; success factors in the implementation and management of aquatic protected areas; measuring performance of aquatic protected areas; and the role of aquatic protected areas in the aquatic ecosystem. *The Forestry Chronicle*, 2003. **Fishes and Forestry** Thomas G. Northcote, G. F. Hartman, 2008-04-15. Many species of fish occupying inland waters reside in watersheds that were or still are surrounded by forests and are dependent in major ways upon such cover. The interactions between fishes and forests are complex, multifaceted dynamic processes involving most inland surface waters, forests, subsurface waters, geology and soils, climate and its changes, and the biotic components of the relevant ecosystems. These interactions also include the aspects of forestry tied to human development, economics, population growth and even philosophies. *Fishes and Forestry* is truly a landmark publication.

The editors Professors Northcote and Hartman have drawn together and carefully edited chapters written by 56 scientists from around the world covering a vast wealth of information never before appearing within the covers of one book. Following an introductory chapter this exceptional work is broadly divided into sections covering the ecology of forests, streams, lakes and estuaries, fish biology and ecology, forestry activities and their effects on aquatic systems and fishes. 14 chapters covering examples of fish-forestry interactions from around the world and a final section covering means of effecting better fish-forestry interactions. *Fishes and Forestry* is an essential purchase for all those involved in inland fisheries, forestry and their interaction, including fisheries scientists, fish biologists, ecologists, environmental scientists and forestry scientists.
