Methods For Ecological Bioenergetics

British Library

The logo of the British Library, featuring a stylized red and white circular emblem.

Methods For Ecological Bioenergetics:

Methods for Ecological Bioenergetics W. Grodzinski, Romuald Z. Klekowski, Annie Duncan, 1975 Organised by the PT Section of the International Biological Programme **Methods for Ecological Bioenergetics**, 1975 Organised by the PT Section of the International Biological Programme **Ecological Methods** T. R. E. Southwood, Peter A. Henderson, 2009-04-13 This classic text whose First Edition one reviewer referred to as the ecologists bible has been substantially revised and rewritten. Not only have the advances made in the field since the Second Edition been taken into account but the scope has been explicitly extended to all macroscopic animals with particular attention being paid to fish as well as other vertebrates. *Ecological Methods* provides a unique synthesis of the methods and techniques available for the study of populations and ecosystems. Techniques used to obtain both absolute and relative population estimates are described and approaches to the direct measurement of births, deaths, migration and the construction and interpretation of life tables are reviewed. The text is extensively illustrated, clearly describing a wide range of equipment and methods of analysis. Comprehensive and up to date bibliographies to each chapter fully cover the relevant literature and references are given to available computer programs and internet addresses. The book has an active web site providing additional illustrations, details of equipment and programs and references to work published since the revision was completed. Like the earlier editions, this book will be an indispensable source of reference to researchers and students at all levels in the fields of ecology, entomology and zoology. Completely revised and rewritten edition of a classic. Scope extended to all macroscopic animals, notably fish and other vertebrates. Active web site displaying additional material. References to computer programmes and internet addresses throughout the text. Affordable paperback **Southwood's Ecological Methods** Peter A. Henderson, 2021-04-01 *Ecological Methods* by the late T. R. E. Southwood and revised over the years by P. A. Henderson has developed into a classic reference work for the field biologist. It provides a handbook of ecological methods and analytical techniques pertinent to the study of animals with an emphasis on non-microscopic animals in both terrestrial and aquatic environments. It remains unique in the breadth of the methods presented and in the depth of the literature cited, stretching right back to the earliest days of ecological research. The universal availability of R as an open source package has radically changed the way ecologists analyse their data. In response, Southwood's classic text has been thoroughly revised to be more relevant and useful to a new generation of ecologists, making the vast resource of R packages more readily available to the wider ecological community. By focusing on the use of R for data analysis supported by worked examples, the book is now more accessible than previous editions to students requiring support and ideas for their projects. Southwood's *Ecological Methods* provides a crucial resource for both graduate students and research scientists in applied ecology, wildlife ecology, fisheries, agriculture, conservation biology and habitat ecology. It will also be useful to the many professional ecologists, wildlife biologists, conservation biologists and practitioners requiring an authoritative overview of ecological methodology. *IBP*
