## Methods Of Dynamic Economics:

Methods of Dynamic Economics J. R. Hicks, 1987-10-08 Capital and Growth was published in 1965 and rapidly established itself as a landmark in economic theory In this volume Sir John takes his earlier work and examines it critically for its present day value The result is a substantially reworked book based on the first and best part of his 1965 publication The theme now more clearly identified is a comparative study of the economics of change and brings in many of Hicks s subsequent developments and refinements in particular a neo Austrian theory of capital which he developed in Capital and Time 1973 A new chapter on Keynes s methods has been added The sum is a more complete classification of the family of models

appropriate for analysing dynamic economics

Dynamic Economics Jerome Adda, Russell W. Cooper, 2003-08-29 An integrated approach to the empirical application of dynamic optimization programming models for students and researchers This book is an effective concise text for students and researchers that combines the tools of dynamic programming with numerical techniques and simulation based econometric methods Doing so it bridges the traditional gap between theoretical and empirical research and offers an integrated framework for studying applied problems in macroeconomics and microeconomics In part I the authors first review the formal theory of dynamic optimization they then present the numerical tools and econometric techniques necessary to evaluate the theoretical models In language accessible to a reader with a limited background in econometrics they explain most of the methods used in applied dynamic research today from the estimation of probability in a coin flip to a complicated nonlinear stochastic structural model These econometric techniques provide the final link between the dynamic

programming problem and data Part II is devoted to the application of dynamic programming to specific areas of applied economics including the study of business cycles consumption and investment behavior In each instance the authors present the specific optimization problem as a dynamic programming problem characterize the optimal policy functions estimate the parameters and use models for policy evaluation The original contribution of Dynamic Economics Quantitative Methods and Applications lies in the integrated approach to the empirical application of dynamic optimization programming models This integration shows that empirical applications actually complement the underlying theory of optimization while dynamic programming problems provide needed structure for estimation and policy evaluation

**Handbook of Computational Economics** Karl Schmedders, Kenneth L. Judd, 2013-12-31. Handbook of Computational Economics summarizes recent advances in economic thought revealing some of the potential offered by modern computational methods. With computational power increasing in hardware and algorithms many economists are closing the gap between economic practice and the frontiers of computational mathematics. In their efforts to accelerate the incorporation of computational power into mainstream research contributors to this volume update the improvements in algorithms that have sharpened econometric tools solution methods for dynamic optimization and equilibrium models and applications to public finance macroeconomics and auctions. They also cover the switch to massive parallelism in the creation of more powerful computers with advances in the development of high power and high throughput computing. Much more can be done to expand the value of computational modeling in economics. In conjunction with volume one 1996 and volume two 2006 this volume offers a remarkable picture of the recent development of economics as a science as well as an exciting preview of its future potential. Samples different styles and approaches reflecting the breadth of computational economics as practiced today. Focuses on problems with few well developed solutions in the literature of other disciplines. Emphasizes the potential for increasing the value of computational modeling in economics.
