Metropolitan Area Networks Marco Pellegrini,Enrico Gregori,Luciano Lenzini,2012-12-06 With the continuing success of Local Area Networks IANs there is an increasing demand to extend their capabilities towards higher data rates and wider areas This together with the progress in fiber optic technology has given rise to the so called Metropolitan Area Networks MANs MANs can span much greater distances than current LAN s and offer data rates on the order of hundreds of Megabits sec Mbps The success of MANs is mainly due to the opportunity they provide to develop new networking products capable of providing high speed commu nications between applications at competitive prices which nonetheless give an adequate return on the manufacturers investments A major factor in of appropriate networking standards achieving this goal is the availability Fiber Distributed Data Interface FDDI and Distributed Queue Dual Bus DQDB are the two standard technologies for MANs for which industrial products are already available For this reason this book focuses mainly on these two standards Nowadays there are several books dealing with MANs and these look mainly at FDDI e g 2 92 118 141 These books focus primarily on the architectures and protocols whereas they pay little attention to per formance analysis Due to the capability of MANs to integrate services a quantitative analysis of the Quality of Service QoS provided by these tech nologies is a relevant issue and is thus covered in depth in this book

Metropolitan Area Networks Gary C. Kessler,David A. Train,1992 This book provides an exhaustive look at current MAN standards and products and how they fit in with other communications services and standards It covers the definition of MANs and the two main strategies today ANSI s Fiber Distributed Data Interface FDDI and the IEEE s Distributed Queue Dual Bus DQDB

Local and Metropolitan Area Networks William Stallings,2000 This book provides up to date coverage of LAN technology and LAN standards and will enhance readers understanding of computer networks for purposes of managing the system solving users problems and planning for future growth related to a company s products and sales Chapter topics include data communications topologies and transmission media protocol architecture Gigabit Ethernet 100 Mbps token ring Fibre Channel ATM LANs wireless LANs concepts of bridges and routers network management and structured cabling systems and types For product development and marketing personnel and data processing personnel

High-Capacity Local and Metropolitan Area Networks Guy Pujolle,2012-12-06 The main objective of this workshop was to review and discuss the state of the art and the latest advances in the area of 1 10 Gbit s throughput for local and metropolitan area networks The first generation of local area networks had throughputs in the range 1 20 Mbit s Well known examples of this first generation networks are the Ethernet and the Token Ring The second generation of networks allowed throughputs in the range 100 200 Mbit s Representatives of this generation are the FDDI double ring and the DQDB IEEE 802 6 networks The third generation networks will have throughputs in the range 1 10 Gbit s The rapid development and deployment of fiber optics worldwide as well as the projected emergence of a market for broadband services have given rise to the development of broadband ISDN standards Currently the Asynchronous

Transfer Mode ATM appears to be a viable solution to broadband networks The possibility of all optical networks in the future is being examined This would allow the tapping of approximately 50 terahertz or so available in the lightwave range of the frequency spectrum It is envisaged that using such a high speed network it will be feasible to distribute high quality video to the home to carry out rapid retrieval of radiological and other scientific images and to enable multi media conferencing between various parties **IEEE Standards for Local and Metropolitan Area Networks**,1999 This standard defines an architecture for Virtual Bridged LANs the services provided in Virtual Bridged LANs and the protocols and algorithms involved in the provision of those services *Metropolitan Area Networks* Marco Conti,Enrico Gregori,Luciano Lenzini,1998-12-01 Advances in Local and Metropolitan Area Networks William Stallings,1994

Metropolitan Area Networks Matthew N.O. Sadiku,1994-12-27 The demand for communication networks has increased dramatically in the last few years creating a need for an intermediate network that operates over a metropolitan area at comparatively high data rates with simple protocols With some characteristics of local area networks and wide area networks the metropolitan area network MAN technology reflects the best features of both The motivations for MAN technology include o interconnection of LANs o high speed services o integrated services MANs can be used in the following areas LAN interconnection Filetransfer Distributed processing Remote services Remote login Metropolitan Area Networks provides an introduction to the key concepts of MANs in an easily understood style Organized into five chapters this unique book acts as an excellent reference for a beginner as well as for the veteran in the field Topics include Introductory and background information about MANs Interworking devices MAN topologies and key issues Various popular protocols proposed for MANs Modeling and performance analysis of common MAN topologies Emerging MAN related technologies such as BISDN ATM networks frame relay cell relay SONET and SMDS For a broad understanding of this expanding subject Metropolitan Area Networks serves as the singular standard in the field MPLS for Metropolitan Area Networks Nam-Kee Tan,2004-11-15 MPLS for Metropolitan Area Networks demonstrates solutions provided by MPLS features The text opens with an overview of metro networks and MPLS It examines traffic engineering issues focusing on fundamental TE concepts and network control The author then discusses how MPLS can bring increased reliability to Metropolitan Area Networks MANs and concludes with a detailed analysis of the service aspects of MANs Topics reviewed include L3 and L2 MPLS VPNs geographically dispersed Ethernet multipoint services virtual private LAN services VPLS and the integrated services IntServ and differentiated services DiffServ QoS models with respect to MPLS *Utilizing High Speed Ethernet Optical Ring Architecture for Metropolitan Area Networks* , **Fiber Optic Metropolitan Area Networks (MANs)** IGIC, Inc.
