Friberg, Pierre Bothorel, 2018-01-18 This book describes the microemulsion phenomenon in a systematic manner and not only provides an up to date introduction to this topic but also serves as the basis for further development in the area. The progress of microemulsion research has taken place in well defined stages. The introduction period was founded on Schulman's original discovery and was as expected focused on the interfacial free energy. Because Schulman obtained his microemulsions from a macroemulsion by the addition of a cosurfactant. The present stage is characterized by an extensively enhanced knowledge about structure and dynamics in these systems. This has led to the realization that the structure of the microemulsions is related both to solutions with critical behaviour and long range order structures the lyotropic liquid crystals. These two aspects have been elucidated independently by the French groups and by the Lund Spectroscopy group.

Laurence S. Romsted, 2014-05-05 Surfactant research explores the forces responsible for surfactant assembly and the critical industrial, medical and personal applications including viscosity control, microelectronics, drug stabilization, drug delivery, cosmetics, enhanced oil recovery and foods. *Surfactant Science and Technology: Retrospects and Prospects* a Festschrift in honor of Dr. Kash Mittal provides a broad perspective with chapters contributed by leaders in the fields of surfactant based physical, organic and materials chemistries. Many of the authors participated in a special symposium in Melbourne, Australia, honoring Kash Mittal's 100th edited book at the 18th Surfactants in Solution (SIS) meeting. Each chapter provides an overview of a specific research area with discussions on past, present and future directions. The book is divided into six parts. Part I reviews the evolution of theoretical models for surfactant self assembly and introduces a model for interpreting ion specific effects on aggregate properties. Part II focuses on interactions of surfactant solutions with solid supports, uses contact angles to understand hydrophobic/hydrophilic changes in a lipid layer, uses surface tension to understand molecular arrangements at interfaces, reviews spreading phenomena, discusses pattern formation on solid surfaces and applies tensiometry to probe flavor components of espresso. Part III discusses novel DNA based materials, multifunctional poly amino acid based graft polymers for drug delivery and polymeric surfactants for stabilizing suspensions and emulsions. Part IV introduces farm based biosurfactants from natural products and greener biosurfactants from bacteria. Part V explores lyotropic liquid crystals and their applications in triggered drug release, microemulsion properties and controlled drug release, the role of hydrotopes in formulations and in enhancing solubilization in liquid crystals, the potential of ionic liquids to generate tunable and selective reaction media and provides an overview of stimuli responsive surfactants. Focusing on emulsions, Part VI reviews the design of emulsion properties for various commercial applications, the role of surfactants in the oil and gas industries and surfactant mechanisms for soil removal via microemulsions and emulsification.
