generator and dynamo essentially creating the science of electrochemistry This book the result of six lectures he delivered at London's Royal Institution concerns another form of energy candlelight Faraday titled the lectures The Chemical History of a Candle choosing the subject because as he explained There is not a law under which any part of this universe is governed which does not come into play and is not touched upon during the time a candle burns That statement is the foundation for a book that explores the components function and weight of the atmosphere the function of a candle wick capillary attraction the carbon content in oxygen and living bodies the production of carbon dioxide from coal gas and sugar the properties of carbonic acid respiration and its analogy to the burning of a candle and much more Unabridged republication of A Course of Six Lectures on the Chemical History of a Candle originally published by Chautauqua Press New York n d New Introduction Numerous illustrations **Michael Faraday** Harry Sootin,2018-05-23 The life story of one of the leading scientists of the 19th century whose experiments led to the development of the dynamo the electric motor and to an industrial revolution Michael Faraday son of a blacksmith was apprenticed at fourteen to a bookbinder in whose shop he gained most of his education and acquired an interest in science from the Encyclopedia Britannica That interest changed and dominated his entire life and led from errand boy to Fellow of the Royal Society Faraday attracted the attention of Sir Humphry Davy a Professor of Chemistry at the Royal Institution who hired the boy as a laboratory assistant Faraday worked with the professor on chemical research for a number of years He discovered benzene butylene and the acids of naphthalene but he never lost interest in electricity and conducted thousands of experiments in an effort to turn electrical energy into mechanical motion He invented the first primitive dynamo and equally primitive motor and made the first generator For forty years Faraday lived and worked in his rooms and laboratory at the Royal Institution When Queen Victoria learned that he and his wife were finding it difficult to climb the stairs to their attic rooms she presented him with one of the houses in Hampton Green Court Faraday was a simple man proud and sensitive He loved his work and refused many commercial offers that would have made him a fortune He also refused a knighthood from a grateful country to whom he brought honor and glory as its leading scientist He did through the help and urging of his friends accept a Fellowship in the Royal Society and he finally accepted a pension though this precipitated the kind of publicity he had sought so hard to avoid all his life Today his laws of electrolysis are part of every modern textbook in chemistry and physics and the unit of electric capacity the Farad was named for him
