Methods In Nonaqueous Enzymology:

Methods in Non-Aqueous Enzymology Munishwar N. Gupta, 2013-12-01 Extending the range of enzymatic catalysis by using non aqueous media has now developed into a powerful approach in biochemistry and biotechnology One peculiar feature which distinguishes it from the conventional enzymology carried out in aqueous buffers is that the awareness of different parameters that control and influence the behaviour of enzymes in such environments has emerged rather slowly Science is about being able to repeat what somebody else has done Absence of knowledge about such well defined parameters factors has sometimes made some workers rather cautious and diffident about using this approach in their laboratories But for this non aqueous enzymology would be more widely practised It is these thoughts that made me feel that the availability of some well defined protocols for various applications involving enzymes in non aqueous environments would further catalyze the growth of this area Hence this book in which each chapter has some protocols in a specific area The protocols are preceded by brief background material The early chapters which are of general importance concern control of water activity and stabilization via immobilization Some subsequent chapters provide the protocols for transformations involving lipids and carbohydrates peptide synthesis and preparation of chiral compounds The disproportionate focus on lipases is not a coincidence this class of enzymes has been used more often than others in non aqueous enzymology

Enzymes in Nonaqueous Solvents Evgeny N. Vulfson, 2008-02-05 Enzymatic catalysis has gained considerable attention in recent years as an efficient tool in the preparation of natural products pharmaceuticals fine chemicals and food ingredients The high selectivity and mild reaction conditions associated with enzymatic transformations have made this approach an attractive alternative in the synthesis of complex bioactive compounds which are often difficult to obtain by standard chemical routes However the majority of organic compounds are not very soluble in water which was traditionally perceived as the only suitable reaction medium for the application of biocatalysts The realization that most enzymes can function perfectly well under nearly anhydrous conditions and in addition display a number of useful properties e.g. highly enhanced stability and different selectivity has dramatically widened the scope of their application to the organic synthesis Another great attraction of using organic solvents rather than water as a reaction solvent is the ability to perform synthetic transformations with relatively inexpensive hydrolytic enzymes It is worth reminding the reader that *in vivo* the synthetic and hydrolytic pathways are catalyzed by different enzymes However elimination of water from the reaction mixture enables the reversal of hydrolytic enzymes and thus avoids the use of the expensive cofactors or activated substrates that are required for their synthetic counterparts

Vulfson, Peter J. Halling, Herbert L. Holland, 2001 In *Enzymes in Nonaqueous Solvents Methods and Protocols* leading chemists biochemists biotechnologists and process engineers summarize for the first time a wide range of methods for

executing enzymatic transformations under nonaqueous conditions Each method includes detailed step by step instructions for its successful completion a list of materials and ancillary notes that explain the scientific basis of the procedure as well as troubleshooting Also provided are a generic description of key reactions advice on biocatalyst preparation discussion of reaction conditions and instructions on bioreactor design Comprehensive and state of the art Enzymes in Nonaqueous Solvents Methods and Protocols offers today s synthetic chemists biochemists and process engineers all the essential information needed to carry out enzymatic reactions in nonaqueous media as well as to successfully scale up to production quantities

Carrier-bound Immobilized Enzymes Linqiu Cao,2006-05-12 The first systematic overview of this key technique since the early 1990s this authoritative reference is the only handbook available to include all recent developments The author draws on his wide ranging experience in both academia and industry to systematically cover all types of enzyme immobilization methods such as adsorption based and covalent immobilization as well as enzyme entrapment and encapsulation Throughout a careful review of materials and techniques for the generation of functional immobilized enzymes benefits both developers and users of carrier bound enzymes A must for biotechnologists biochemists and preparative chemists using enzymes in their daily work

Hirs,Serge N. Timasheff,1977-11-28 The critically acclaimed laboratory standard Methods in Enzymology is one of the most highly respected publications in the field of biochemistry Since 1955 each volume has been eagerly awaited frequently consulted and praised by researchers and reviewers alike The series contains much material still relevant today truly an essential publication for researchers in all fields of life sciences
