Methods of Descent for Nondifferentiable Optimization Krzysztof C. Kiwiel,2006-11-14      *Methods of Descent for Nondifferentiable Optimization* Krzysztof C. Kiwiel,2014-09-01      **Methods of descent for nondifferentiable optimization** Krzysztof C. Kiwiel,1985      **Finite Element Method for Hemivariational Inequalities** J. Haslinger,M. Miettinen,Panagiotis D. Panagiotopoulos,2013-03-09 Hemivariational inequalities represent an important class of problems in nonsmooth and nonconvex mechanics By means of them problems with nonmonotone possibly multivalued constitutive laws can be formulated mathematically analyzed and finally numerically solved The present book gives a rigorous analysis of finite element approximation for a class of hemivariational inequalities of elliptic and parabolic type Finite element models are described and their convergence properties are established Discretized models are numerically treated as nonconvex and nonsmooth optimization problems The book includes a comprehensive description of typical representants of nonsmooth optimization methods Basic knowledge of finite element mathematics functional and nonsmooth analysis is needed The book is self contained and all necessary results from these disciplines are summarized in the introductory chapter Audience Engineers and applied mathematicians at universities and working in industry Also graduate level students in advanced nonlinear computational mechanics mathematics of finite elements and approximation theory Chapter 1 includes the necessary prerequisite materials      *Minimization Methods for Non-Differentiable Functions* N.Z. Shor,2012-12-06 In recent years much attention has been given to the development of automatic systems of planning design and control in various branches of the national economy Quality of decisions is an issue which has come to the forefront increasing the significance of optimization algorithms in mathematical software packages for automatic systems of various levels and purposes Methods for minimizing functions with discontinuous gradients are gaining in importance and the experts in the computational methods of mathematical programming tend to agree that progress in the development of algorithms for minimizing nonsmooth functions is the key to the construction of efficient techniques for solving large scale problems This monograph summarizes to a certain extent fifteen years of the author's work on developing generalized gradient methods for nonsmooth minimization This work started in the department of economic cybernetics of the Institute of Cybernetics of the Ukrainian Academy of Sciences under the supervision of V S Mikhalevich a member of the Ukrainian Academy of Sciences in connection with the need for solutions to important practical problems of optimal planning and design In Chap I we describe basic classes of nonsmooth functions that are differentiable almost everywhere and analyze various ways of defining generalized gradient sets In Chap 2 we study in detail various versions of the subgradient method show their relation to the methods of Fejer type approximations and briefly present the fundamentals of the subgradient methods      **Computational Techniques And Applications: Ctac 95 - Proceedings Of The Seventh Biennial Conference** Robert L May,Alan K Easton,1996-08-30 This proceedings contains seven invited papers and 100 contributed papers The topics covered range

from studies of theoretical aspects of computational methods through to simulations of large scale industrial processes with an emphasis on the efficient use of computers to solve practical problems Developers and users of computational techniques who wish to keep up with recent developments in the application of modern computational technology to problems in science and engineering will find much of interest in this volume From Convexity to Nonconvexity R.P. Gilbert, Panagiotis D.

Panagiotopoulos, Panos M. Pardalos, 2013-12-01 This collection of papers is dedicated to the memory of Gaetano Fichera a great mathematician and also a good friend to the editors Regrettably it took an unusual amount of time to bring this collection out This was primarily due to the fact that the main editor who had collected all of the materials for this volume P D Panagiotopoulos died unexpectedly during the period when we were editing the manuscript The other two editors in appreciation of Panagiotopoulos contribution to this field believe it is therefore fitting that this collection be dedicated to his memory also The theme of the collection is centered around the seminal research of G Fichera on the Signorini problem Variants on this idea enter in different ways For example by bringing in friction the problem is no longer self adjoint and the minimization formulation is not valid A large portion of this collection is devoted to survey papers concerning hemivariational methods with a main point of its application to nonsmooth mechanics Hemivariational inequalities which are a generalization of variational inequalities were pioneered by Panagiotopoulos There are many applications of this theory to the study of non convex energy functionals occurring in many branches of mechanics An area of concentration concerns contact problems in particular quasistatic and dynamic contact problems with friction and damage Nonsmooth optimization methods which may be divided into the main groups of subgradient methods and bundle methods are also discussed in this collection **A**
