Mexico Megacity:

Mexico Megacity James B Pick, 2018-02-23 This book describes and analyzes a wealth of data about Mexico City's growth change and spatial patterns. Applying modern techniques of geographic information systems and cluster analysis, the authors reveal many previously unknown or unrecognized trends and patterns. The authors provide historical background, analyze key findings and relationships, and tie their results to the literature on Mexico City and other giant cities. The United Nations predicts the emergence of many more giant cities worldwide over the next quarter century, most of which will appear in the developing world. Mexico Megacity may be a milestone from a comparative perspective in increasing knowledge about one developing world megacity and offering analytical tools to study others. With a population of 15 million persons in 1990, Mexico City is one of the world's largest cities. It is a famous center of civilizations and culture and one of the economic capitals of the Americas, but it also has serious social and economic problems, including large impoverished zones, severe environmental degradation, crime, and overpopulation. This book describes and analyzes growth change and spatial patterns in Mexico City, looking at urbanization, population, marriage and fertility, health and mortality, migration, environment, and housing. Social characteristics, the economy, labor force, and corporate structure are also covered. Applying modern techniques of geographic information systems and spatial analysis, the authors reveal many previously unknown or unrecognized trends and patterns. In a capstone chapter, they summarize the spatial patterns in a series of cluster analyses that identify distinctive zones within the metropolis: a prosperous core, surrounding complex ring patterns, an impoverished zone, and semi-rural arms. They also compare the pattern of Mexico City's cluster zones to the classical and developmental literature on cities. In closing, the authors suggest government policies that would foster optimal future development of an even larger metropolis. This book addresses a topic of growing importance. The United Nations predicts the emergence of many more giant cities worldwide over the next quarter century, most of which will appear in the developing world. Mexico Megacity is a milestone work that increases our knowledge about one developing world megacity while offering analytical tools for studying others. **Air**

Quality in the Mexico Megacity L. Molina, 2002-02-28 In this book, experts in atmospheric sciences, human health, economics, social and political sciences contribute to an integrated assessment of the complex elements needed to structure air quality policy in the 21st century. The analysis is developed through a case study of the Mexico City Metropolitan Area, one of the world's largest megacities, in which air pollution grew unchecked for decades. The international research team is led by Luisa T. and Mario J. Molina, Nobel Laureate in Chemistry. Improvements in Mexico City's air quality in the last decade testify to the power of determined and enlightened policy making and throw into relief the tough problems that remain to be solved. The volume's first six chapters, including the contributions of over 50 distinguished scholars from Mexico and the US, outline the fundamental areas of knowledge that policy makers must accommodate. The message is that only good science and well-chosen technologies can direct the way to corrective regulatory measures, but without strong commitment from government.
