The Magic of Numbers Benedict H. Gross, Joe Harris, 2004 The Magic of Numbers was written with two goals in mind first to introduce the reader to some of the beauty of numbers the patterns in their behavior that have fascinated mathematicians for millennia and some surprising applications of those patterns second and equally important to teach the reader something of the mathematical mode of thought the feeling of exploration excitement and discovery that are part of how mathematics is developed The book written originally for the course Quantitative Reasoning 28 that the authors developed and taught at Harvard draws the reader into the content through an engaging and informal writing style Example driven it reduces to a minimum the abstract notation and formal argument that often creates a barrier between mathematicians and students focusing more instead on the experimental aspect of the subject Above all the authors communicate to the reader a sense of the joy and fascination of learning mathematics Additional exercises problems and sample exams are available at www.prenhall.com/gross Principal topics include Counting and basic combinatorics with applications to probability and games The arithmetic of natural numbers the Euclidean Algorithm and the unique factorization theorem Modular arithmetic including Fermat's Theorem Euler's Theorem and how to take powers and roots Codes how the special properties of ordinary and modular arithmetic in combination allow us to construct the public key codes that help make data transmission secure [The Magic of Numbers](#) Eric Temple Bell, 2014-06-10 Superb stimulating

fascinating world of numbers and number theory Numbers you know have a mysterious life of their own It would be naive claims Dr Matrix to suppose that there is such a thing as a randomly arranged group of symbols Consider for example the decimal expansion of pi Long considered a random series it is actually rich with remarkable patterns Correctly interpreted says Dr Matrix pi conveys the entire history of the human race Dr Matrix uncovers patterns and signs that will astound you As Dr Matrix demonstrates we need only look to find clues all around us in number and language coincidences that will unlock the mysteries of the universe In *The Magic Numbers of Dr Matrix* Martin Gardner introduces us to this extraordinary man Dr Irving Joshua Matrix Believed by many to be the greatest numerologist who ever lived Dr Matrix claims to be a reincarnation of Pythagoras He was however completely unknown to the scientific community until Gardner wrote about him in *Scientific American* in 1960 That first report and the subsequent ones that appeared with each new encounter are collected here in their entirety We follow Dr Matrix as he roams the world and assumes new identities and discovers new manifestations of the power of numbers to explain and predict and entertain Always at his side is his beautiful Eurasian daughter Iva who abets and protects her father in each new adventure As you delve into *The Magic Numbers of Dr Matrix* you will master some significant combinatorial mathematics and number theory The many remarkable puzzles of Dr Matrix are all clearly answered in the back of the book together with commentary and references by Gardner to enlighten the uninitiated and entertain the inquiring reader
