Number Theory in Progress Kálmán Györy, Henryk Iwaniec, Jerzy Urbanowicz, 2012-02-13 Proceedings of the International Conference on Number Theory organized by the Stefan Banach International Mathematical Center in Honor of the 60th Birthday of Andrzej Schinzel Zakopane Poland June 30 July 9 1997      *Number Theory in Progress: Elementary and analytic number theory* Kálmán Györy, Henryk Iwaniec, 1999      Recent Progress in Analytic Number Theory Heini Halberstam, C.

Hooley, 1981 The papers presented in these two volumes were presented at the Durham Symposium of the London Mathematical Society which was held on the campus of Durham University between July 22 and August 1 1979 attended by eight mathematicians from around the world      **Research Directions in Number Theory** Alina Bucur, Wei Ho, Renate Scheidler, 2024-06-26 This is the fifth proceedings volume published under the Women in Numbers umbrella The WIN workshops and their proceedings volumes are part of the WIN network aimed at highlighting the research of women and gender minorities in number theory as well as increasing their participation and boosting their potential collaborations in number theory and related fields The volume contains research articles in the mathematical area of number theory written by teams of scholars at all levels in the field More information about the network its goals and purpose past and future conferences and past proceedings volumes can be found on the WIN website This volume contains research outcomes and results produced by the collaborative research groups created under the Women in Numbers V workshop the 5th in its series The actual workshop was to take place in 2020 at the Banff International Research Station in Banff Canada but could not take place onsite due to COVID The associated research groups each consisting of 1 2 leaders and 2 4 junior researchers were formed nevertheless and their collaborations went ahead in purely virtual form as well as other papers by author teams for which at least 50% of the authors identify as women or gender minorities These contributions include original research and survey articles in a wide variety of subareas within number theory The former present new cutting edge research that will be of interest to experts in the field to the benefit of their own research The survey articles serve as an accessible introduction for graduate students and other readers to areas of number theory that may be outside their area of expertise

Representation Theory, Number Theory, and Invariant Theory Jim Cogdell, Ju-Lee Kim, Chen-Bo Zhu, 2017-10-19 This book contains selected papers based on talks given at the Representation Theory Number Theory and Invariant Theory conference held at Yale University from June 1 to June 5 2015 The meeting and this resulting volume are in honor of Professor Roger Howe on the occasion of his 70th birthday whose work and insights have been deeply influential in the development of these fields The speakers who contributed to this work include Roger Howe s doctoral students Roger Howe himself and other world renowned mathematicians Topics covered include automorphic forms invariant theory representation theory of reductive groups over local fields and related subjects      **Trends in Number Theory** Fernando Chamizo, Jordi Guàrdia, Antonio Rojas-León, José María Tornero, 2015-09-28 This volume contains the proceedings of the Fifth Spanish Meeting on

Number Theory held from July 8-12, 2013 at the Universidad de Sevilla, Sevilla, Spain. The articles contained in this book give a panoramic vision of the current research in number theory both in Spain and abroad. Some of the topics covered in this volume are classical algebraic number theory, arithmetic geometry and analytic number theory. This book is published in cooperation with Real Sociedad Matemática Española (RSME).

**Cryptography and Computational Number Theory** Kwok Y. Lam, Igor Shparlinski, Huaxiong Wang, Chaoping Xing, 2013-03-07. This volume contains the refereed proceedings of the Workshop on Cryptography and Computational Number Theory (CCNT 99) which has been held in Singapore during the week of November 22-26, 1999. The workshop was organized by the Centre for Systems Security of the National University of Singapore. We gratefully acknowledge the financial support from the Singapore National Science and Technology Board under the grant number RP960668 M. The idea for this workshop grew out of the recognition of the recent rapid development in various areas of cryptography and computational number theory. The event followed the concept of the research programs at such well-known research institutions as the Newton Institute (UK), Oberwolfach and Dagstuhl (Germany) and Luminy (France). Accordingly, there were only invited lectures at the workshop with plenty of time for informal discussions. It was hoped and successfully achieved that the meeting would encourage and stimulate further research in information and computer security as well as in the design and implementation of number theoretic cryptosystems and other related areas. Another goal of the meeting was to stimulate collaboration and more active interaction between mathematicians, computer scientists, practical cryptographers and engineers in academia, industry and government.

**Analytic Number Theory** Chaohua Jia, Kohji Matsumoto, 2013-11-11. From September 13 to 17, 1999, the First China-Japan Seminar on Number Theory was held in Beijing, China, which was organized by the Institute of Mathematics, Academia Sinica, jointly with the Department of Mathematics, Peking University. Ten Japanese Professors and eighteen Chinese Professors attended this seminar. Professor Yuan Wang was the chairman and Professor Chengbiao Pan was the vice chairman. This seminar was planned and prepared by Professor Shigeru Kanemitsu and the first named editor. Talks covered various research fields including analytic number theory, algebraic number theory, modular forms and transcendental number theory. The Great Wall and acrobatics impressed Japanese visitors. From November 29 to December 3, 1999, an annual conference on analytic number theory was held in Kyoto, Japan, as one of the conferences supported by the Research Institute of Mathematical Sciences (RIMS), Kyoto University. The organizer was the second named editor. About one hundred Japanese scholars and some foreign visitors coming from China, France, Germany and India attended this conference. Talks covered many branches in number theory. The scenery in Kyoto, Arashiyama Mountain and Katsura River impressed foreign visitors. An informal report of this conference was published as the volume 1160 of *Surikaiseki Kenkyusho Kokyuroku* (June 2000) published by RIMS, Kyoto University. The present book is the Proceedings of these two conferences which records mainly some recent progress in number theory in China and Japan and reflects the academic exchanging between China and Japan.

Number Theory

Sinnou David,1995 This is the fourteenth annual volume arising from the Seminaire de Theorie des Nombres de Paris As with previous volumes the whole spectrum of number theory is discussed with many contributions from some of the world s leading figures The very latest research developments are covered and much of the work presented here will not be found elsewhere Also included are surveys that will serve to guide the reader through the extensive published literature This will be a necessary addition to the libraries of all workers in number theory      **Cryptographic Applications of Analytic Number**

**Theory** Igor Shparlinski,2013-03-07 The book introduces new techniques that imply rigorous lower bounds on the complexity of some number theoretic and cryptographic problems It also establishes certain attractive pseudorandom properties of various cryptographic primitives These methods and techniques are based on bounds of character sums and numbers of solutions of some polynomial equations over finite fields and residue rings Other number theoretic techniques such as sieve methods and lattice reduction algorithms are used as well The book also contains a number of open problems and proposals for further research The emphasis is on obtaining unconditional rigorously proved statements The bright side of this approach is that the results do not depend on any assumptions or conjectures On the downside the results are much weaker than those which are widely believed to be true We obtain several lower bounds exponential in terms of  $\log p$  on the degrees and orders of  $\phi$  polynomials  $\phi$  algebraic functions  $\phi$  Boolean functions  $\phi$  linear recurrence sequences coinciding with values of the discrete logarithm modulo a prime  $p$  at sufficiently many points the number of points can be as small as  $p^{1/2}$   $O$  These functions are considered over the residue ring modulo  $p$  and over the residue ring modulo an arbitrary divisor  $d$  of  $p-1$  The case of  $d=2$  is of special interest since it corresponds to the representation of the rightmost bit of the discrete logarithm and defines whether the argument is a quadratic residue      **Number Theory in Progress** ,1999      Reviews in Number Theory
