Numerical Methods Of Statistics:

Numerical Methods of Statistics John F. Monahan, 2001-02-05 This 2001 book provides a basic background in numerical analysis and its applications in statistics Numerical Methods of Statistics John F. Monahan, 2011 This book explains how computer software is designed to perform the tasks required for sophisticated statistical analysis For statisticians it examines the nitty gritty computational problems behind statistical methods For mathematicians and computer scientists it looks at the application of mathematical tools to statistical problems The first half of the book offers a basic background in numerical analysis that emphasizes issues important to statisticians The next several chapters cover a broad array of statistical tools such as maximum likelihood and nonlinear regression The author also treats the application of numerical tools numerical integration and random number generation are explained in a unified manner reflecting complementary views of Monte Carlo methods Each chapter contains exercises that range from simple questions to research problems Most of the examples are accompanied by demonstration and source code available from the author's website New in this second edition are demonstrations coded in R as well as new sections on linear programming and the Nelder Mead search algorithm

Numerical Issues in Statistical Computing for the Social Scientist Micah Altman, Jeff Gill, Michael P. McDonald, 2004-02-15 At last a social scientist's guide through the pitfalls of modern statistical computing Addressing the current deficiency in the literature on statistical methods as they apply to the social and behavioral sciences Numerical Issues in Statistical Computing for the Social Scientist seeks to provide readers with a unique practical guidebook to the numerical methods underlying computerized statistical calculations specific to these fields The authors demonstrate that knowledge of these numerical methods and how they are used in statistical packages is essential for making accurate inferences With the aid of key contributors from both the social and behavioral sciences the authors have assembled a rich set of interrelated chapters designed to guide empirical social scientists through the potential minefield of modern statistical computing Uniquely accessible and abounding in modern day tools tricks and advice the text successfully bridges the gap between the current level of social science methodology and the more sophisticated technical coverage usually associated with the statistical field Highlights include A focus on problems occurring in maximum likelihood estimation Integrated examples of statistical computing using software packages such as the SAS Gauss Splus R Stata LIMDEP SPSS WinBUGS and MATLAB A guide to choosing accurate statistical packages Discussions of a multitude of computationally intensive statistical approaches such as ecological inference Markov chain Monte Carlo and spatial regression analysis Emphasis on specific numerical problems statistical procedures and their applications in the field Replications and re analysis of published social science research using innovative numerical methods Key numerical estimation issues along with the means of avoiding common pitfalls A related Web site includes test data for use in demonstrating numerical problems code for applying the original methods described in the book and an online bibliography of Web resources for the statistical computation Designed as an independent research tool a professional reference or a classroom supplement the book presents a well thought out
