Numerical Modelling For Electromagnetic Non Destructive Evaluation:

Numerical Modeling for Electromagnetic Non-Destructive Evaluation N. Ida, 1994-12-31 This text on numerical methods applied to the analysis of electromagnetic nondestructive testing NOT phenomena is the first in a series devoted to all aspects of engineering nondestructive evaluation The timing of this series is most appropriate as many university engineering physics faculties around the world recognizing the industrial significance of the subject are organizing new courses and programs with engineering NOE as a theme Additional texts in the series will cover electromagnetics for engineering NOE microwave NOT methods ultrasonic testing radiographic methods and signal processing for NOE It is the intended purpose of the series to provide senior graduate level coverage of the material suitable for university curricula and to be generally useful to those in industry with engineering degrees who wish to upgrade their NOE skills beyond those needed for certification This dual purpose for the series reflects the very applied nature of NOE and the need to develop suitable texts capable of bridging the gap between research laboratory studies of NOE phenomena and the real world of certification and industrial applications The reader might be tempted to question these assertions in light of the rather mathematical nature of this first text However the subject of numerical modeling is of critical importance to a thorough understanding of the field defect interactions at the heart of all electromagnetic NOT phenomena Electromagnetic Nondestructive Evaluation (IV) Satish S. Udpa, 2000 A description of the state of the art in electromagnetic nondestructive evaluation NDE techniques Topics covered range from magnetostatic to eddy current and microwave NDE methods Advances in materials characterization forward simulation models sensor design and inverse methodologies are discussed The book also includes contributions on benchmark problems and solutions Electromagnetic Nondestructive Evaluation (XVII) Klara Capova, 2014 The demand for new and effective methods for the evaluation maintenance and live time testing of objects in fields as diverse as engineering medicine and art continues to grow Electromagnetic non destructive evaluation is a process by which an object can be assessed without permanent alteration by means of inducing electric currents or magnetic fields within the object and observing the electromagnetic response This book presents selected papers from the 18th International Workshop on Electromagnetic Non destructive Evaluation ENDE which was held in Bratislava Slovak Republic on June 25 28 2013 The aim of the workshop was to provide an international forum for the discussion of the state of the art and perspectives in the field from the view of science technology and engineering The book is divided into five main sections advanced sensors analytical and numerical modeling and biomedical applications innovative industrial applications new developments and solutions of inverse problems Containing 40 peer reviewed papers it will be of interest to all those whose work involves electromagnetic non destructive evaluation whatever their discipline **Ultrasonic and Advanced Methods for Nondestructive Testing and Material Characterization** Chi-hau Chen, 2007 Ultrasonic methods have been very popular in nondestructive testing and characterization of materials This book deals with both industrial ultrasound and

medical ultrasound The advantages of ultrasound include flexibility low cost in line operation and providing data in both signal and image formats for further analysis The book devotes 11 chapters to ultrasonic methods However ultrasonic methods can be much less effective with some applications So the book also has 14 chapters catering to other or advanced methods for nondestructive testing or material characterization Topics like structural health monitoring Terahertz methods X ray and thermography methods are presented Besides different sensors for nondestructive testing the book places much emphasis on signal image processing and pattern recognition of the signals acquired

Electromagnetic Nondestructive Evaluation (XI) A. Tamburrino, Y. Melikhov, Z. Chen, 2008-11-05 The 12th International Workshop on Electromagnetic Nondestructive Evaluation ENDE 07 was held from the 19th to the 21st of June 2007 at the Wolfson Centre for Magnetism at Cardiff University Cardiff United Kingdom The aim of this annual workshop is to bring together engineers and scientists from universities research institutions and industry to discuss and exchange the latest ideas and findings in basic research and development as well as industrial applications of electromagnetic nondestructive evaluation This publication contains the proceedings of the workshop In this book you will find a variety of topics on both theoretical and experimental aspects of nondestructive evaluation in eddy currents magnetic measurements magnetic flux leakage Barkhausen methods new methods and inverse problems for crack detection

Electromagnetic Nondestructive Evaluation (VII) Gerd Dobmann, 2006 The aim of this selection of papers is to bring together researchers working very deep in the basics of electromagnetic NDT on one hand and industrialists discussing their practical problems on the other hand The papers cover topics as Microwave applications and Material Characterization General Eddy Current Inspection Tasks Novel Techniques and Sensors Magnetic Flux leakage Inspection Steam Generator Eddy Current Inspection

Tasks and Material Characterization Especially Novel Techniques and Sensors and Material Characterization are discussed on multiple papers This publication gives a good overview of the many scientific problems in this area but also explains the actual challenges for the scientific technical community like problems with in line inspection of pipelines or the enhancing of the inspection performance in steam generator tubes inspection in the nuclear field The material is important for scientists and engineers working in the field of electromagnetic non destructive testing in defect detection and sizing as well as in material characterization
