Numerische Methoden Der Approximations T:

Numerische Methoden der Approximationstheorie Lothar Collatz, Günther Meinardus, 1972 *Numerical Methods of Approximation Theory, Vol.6* | *Numerische Methoden der Approximationstheorie, Band 6* Collatz, Meinardus, Werner, 1982

Der Band enthält Manuskripte zu Vorträgen die auf einer von den Herausgebern geleiteten Tagung über Numerische Methoden der Approximationstheorie am Mathematischen Forschungsinstitut Oberwolfach in der Zeit vom 18. 24. Januar 1981 gehalten wurden. Das Spektrum der Vorträge reichte von der klassischen Approximationstheorie über mehrdimensionale Approximationsverfahren bis hin zu praxisbezogenen Fragestellungen. Zu den zuerst genannten Gebieten gehörten z. B. die Verfeinerung von Fehlerabschätzungen bei der Polynominterpolation, Fragen zur Eindeutigkeit, Charakterisierung optimaler Interpolationsprozesse und Algorithmen zur rationalen Interpolation. Bei den weiteren genannten Gebieten spiegeln zahlreiche Vorträge das steigende Interesse an der mehrdimensionalen Interpolation insbesondere mit verschiedenen Arten von Splines wider. Hier standen u. a. Probleme der Parameterschätzung in der Medizin und Flugtechnik, Fragen der Approximationstheorie bei der Konstruktion von Plottern und stabile Algorithmen beim Arbeiten mit mehrdimensionalen B-Splines im Mittelpunkt des Interesses. Die Tagung lieferte einen repräsentativen Überblick über die aktuellen Trends in der Approximationstheorie. Zum guten Erfolg der Tagung trug wie immer die hervorragende Betreuung durch die Mitarbeiter und Angestellten des Instituts so wie das verständnisvolle Entgegenkommen des Institutsdirektors Herrn Professor Dr. Barner bei. Unser besonderer Dank gilt dem Birkhäuser Verlag für die wie stets sehr gute Ausstattung.

The first investigations of nonlinear approximation problems were made by P. L. Chebyshev in the last century and the entire theory of uniform approximation is strongly connected with his name. By making use of his ideas the theories of best uniform approximation by rational functions and by polynomials were developed over the years in an almost unified framework. The difference between linear and rational approximation and its implications first became apparent in the 1960s. At roughly the same time other approaches to nonlinear approximation were also developed. The use of new tools such as nonlinear functional analysis and topological methods showed that linearization is not sufficient for a complete treatment of nonlinear families. In particular the application of global analysis and the consideration of flows on the family of approximating functions introduced ideas which were previously unknown in approximation theory. These were and still are important in many branches of analysis. On the other hand methods developed for nonlinear approximation problems can often be successfully applied to problems which belong to or arise from linear approximation. An important example is the

solution of moment problems via rational approximation Best quadrature formulae or the search for best linear spaces often leads to the consideration of spline functions with free nodes The most famous problem of this kind namely best interpolation by polynomials is treated in the appendix of this book Nonlinear Numerical Methods and Rational Approximation II A. Cuyt, 2012-12-06 These are the proceedings of the international conference on Nonlinear numerical methods and Rational approximation II organised by Annie Cuyt at the University of Antwerp Belgium 05 11 September 1993 It was held for the third time in Antwerp at the conference center of UIA after successful meetings in 1979 and 1987 and an almost yearly tradition since the early 70 s The following figures illustrate the growing number of participants and their geographical dissemination In 1993 the Belgian scientific committee consisted of A Bultheel Leuven A Cuyt Antwerp J Meinguet Louvain la Neuve and J P Thiran Namur The conference focused on the use of rational functions in different fields of Numerical Analysis The invited speakers discussed Orthogonal polynomials D S Lubinsky Rational interpolation M Gutknecht Rational approximation E B Saff Padé approximation A Gonchar and Continued fractions W B Jones In contributed talks multivariate and multidimensional problems applications and implementations of each main topic were considered To each of the five main topics a separate conference day was devoted and a separate proceedings chapter compiled accordingly In this way the proceedings reflect the organisation of the talks at the conference Nonlinear numerical methods and rational approximation may be a narrow field for the outside world but it provides a vast playground for the chosen ones It can fascinate specialists from Moscow to South Africa from Boulder in Colorado and from sunny Florida to Zurich in Switzerland **Knot Insertion and Deletion Algorithms for B-Spline Curves and Surfaces** Ronald N. Goldman, Tom Lyche, 1993-01-01 New approaches to knot insertion and deletion are presented in this unique detailed approach to understanding analyzing and rendering B-spline curves and surfaces Computer scientists mechanical engineers and programmers and analysts involved in CAD and CAGD will find innovative practical applications using the blossoming approach to knot insertion factored knot insertion and knot deletion as well as comparisons of many knot insertion algorithms This book also serves as an excellent reference guide for graduate students involved in computer aided geometric design *Shape-Preserving Approximation by Real and Complex Polynomials* Sorin G. Gal, 2010-06-09 First comprehensive treatment in book form of shape preserving approximation by real or complex polynomials in one or several variables Of interest to grad students and researchers in approximation theory mathematical analysis numerical analysis Computer Aided Geometric Design robotics data fitting chemistry fluid mechanics and engineering Contains many open problems to spur future research Rich and updated bibliography Overconvergence in Complex Approximation Sorin G. Gal, 2014-07-08 This monograph deals with the quantitative overconvergence phenomenon in complex approximation by various operators The book is divided into three chapters First the results for the Schurer Faber operator Beta operators of first kind Bernstein Durrmeyer type operators and Lorentz operator are presented The main focus is on results for several q Bernstein kind of operators with $q \geq 1$ when the

geometric order of approximation 1 qn is obtained not only in complex compact disks but also in quaternion compact disks and in other compact subsets of the complex plane The focus then shifts to quantitative overconvergence and convolution overconvergence results for the complex potentials generated by the Beta and Gamma Euler s functions Finally quantitative overconvergence results for the most classical orthogonal expansions of Chebyshev Legendre Hermite Laguerre and Gegenbauer kinds attached to vector valued functions are presented Each chapter concludes with a notes and open problems section thus providing stimulation for further research An extensive bibliography and index complete the text This book is suitable for researchers and graduate students working in complex approximation and its applications mathematical analysis and numerical analysis
