Nutrition in the 90's Kotsonis,1994-03-08 This

work analyzes current issues and controversies in nutrition and health. It covers topics such as diet and breast cancer, complex carbohydrates and health, the genetics of cardiovascular diseases, the role of low fat diets and exercise in weight loss, the benefits of exercise for older adults and for the maintenance of bone health, new approaches to nutritional research and the impact of health claims regulations under the Nutrition Labelling Education Act on food product development.

Nutrition, Concepts and Controversies Eva May Nunnelley Hamilton, Eleanor Noss Whitney, 1982 Abstract Principles of nutrition science guidelines for food choices and techniques for assessing nutrition information are the focuses in this second edition. Explanations are based on general biology; readers do not need a chemistry background. Chapters contain accepted information on nutrition but controversial issues also are included. Evidence is presented for and against current nutritional claims such as the relationship of additives, allergies or sugar to hyperactivity. The harm caused by infant formula to babies in developing countries and trusting your doctor for nutritional advice are other examples of nutritional controversies. Chapters include food features which relate nutrition information to practical suggestions for shopping, eating out in restaurants and food preparation. Self study assignments allow readers to evaluate their own diet. In addition to basic nutrition information, food labeling, additives and nutrition throughout the life cycle are discussed. Appendices include standard food tables, information on crude fiber content of foods and cholesterol and P/S ratios of food.
