produced large and complex data sets that require quantitative modeling for analysis This book provides a complete overview
of computational immunology from basic concepts to mathematical modeling at the single molecule cellular organism and
population levels It showcases modern mechanistic models and their use in making predictions designing experiments and
elucidating underlying biochemical processes It begins with an introduction to data analysis approximations and assumptions
used in model building Core chapters address models and methods for studying immune responses with fundamental
concepts clearly defined Readers from immunology quantitative biology and applied physics will benefit from the following
Fundamental principles of computational immunology and modern quantitative methods for studying immune response at the

Anis,Yinglong Chen,Baohong Zhang,2024-09-12 According to the World Food Programme 135 million suffer from acute hunger largely due to man made conflicts climate change and economic downturns The COVID 19 pandemic could now double that number putting an additional 130 million people at risk of suffering with acute hunger Moreover food insecurity and low dietary quality cause huge public health problems Malnutrition is responsible for physical and mental development impairments various infectious diseases and unacceptably high numbers of premature deaths Since the Green Revolution a constant increase in crop productivity have experienced however there is concern that yield improvement is not enough Current rate of annual yield increases for major crops ranges between 0.8-1.2 % which needs to be doubled to feed the ever increasing human population The classical breeding techniques contributed toward the development of superior crop varieties which helped in achieving food security for ever increasing human population However with the passage of time these classical breeding approaches are lagging to meet global food requirements and scientists are working on novel plant breeding techniques NPBTs and other breakthrough agricultural techniques to reduce hunger Recently OMICs genome wide association studies GWAS QTL mapping Next Generation Sequencing NGS and genome editing GE approaches etc have proven to be powerful tools that we have at our disposal to overcome substantial obstacles in the way of efficiency and productivity of current agricultural practices In addition recently there has been a rapid development of online forums methods protocols and application strategies for genome based techniques and their applications for crop improvement
