Numerical Ecology P. **Numerical Ecology with R** Daniel Borcard,Francois Gillet,Pierre Legendre,2011-01-07

Numerical Ecology with R provides a long awaited bridge between a textbook in Numerical Ecology and the implementation of this discipline in the R language After short theoretical overviews the authors accompany the users through the exploration of the methods by means of applied and extensively commented examples Users are invited to use this book as a teaching companion at the computer The travel starts with exploratory approaches proceeds with the construction of association matrices then addresses three families of methods clustering unconstrained and canonical ordination and spatial analysis All the necessary data files the scripts used in the chapters as well as the extra R functions and packages written by the authors can be downloaded from a web page accessible through the Springer web site <http://adn.biol.umontreal.ca/numerical-ecology> numecolR This book is aimed at professional researchers practitioners graduate students and teachers in ecology environmental science and engineering and in related fields such as oceanography molecular ecology agriculture and soil science who already have a background in general and multivariate statistics and wish to apply this knowledge to their data using the R language as well as people willing to accompany their disciplinary learning with practical applications People from other fields e g geology geography paleoecology phylogenetics anthropology the social and education sciences etc may also benefit from the materials presented in this book The three authors teach numerical ecology both theoretical and practical to a wide array of audiences in regular courses in their Universities and in short courses given around the world Daniel Borcard is lecturer of Biostatistics and Ecology and researcher in Numerical Ecology at Universit de Montr al Qu bec Canada Fran ois Gillet is professor of Community Ecology and Ecological Modelling at Universit de Franche Comt Besan on France Pierre Legendre is professor of Quantitative Biology and Ecology at Universit de Montr al Fellow of the Royal Society of Canada and ISI Highly Cited Researcher in Ecology Environment

Developments in Numerical Ecology Pierre Legendre,Louis Legendre,2013-06-29 From earlier ecological studies it has become apparent that simple univariate or bivariate statistics are often inappropriate and that multivariate statistical analyses must be applied Despite several difficulties arising from the application of multivariate methods community ecology has acquired a mathematical framework with three consequences it can develop as an exact science it can be applied operationally as a computer assisted science to the solution of environmental problems and it can exchange information with other disciplines using the language of mathematics This book comprises the invited lectures as well as working group reports on the NATO workshop held in Roscoff France to improve the applicability of this new method numerical ecology to specific ecological problems

**Numerical Ecology** P. Legendre, Loic F J Legendre, 1998-11-25 The book describes and discusses the numerical methods which are successfully being used for analysing ecological data using a clear and comprehensive approach. These methods are derived from the fields of mathematical physics parametric and nonparametric statistics information theory numerical taxonomy archaeology psychometry sociometry econometry and others. Compared to the first edition of Numerical Ecology this second edition includes three new chapters dealing with the analysis of semiquantitative data canonical analysis and spatial analysis. New sections have been added to almost all other chapters. There are sections listing available computer programs and packages at the end of several chapters. As in the previous English and French editions there are numerous examples from the ecological literature and the choice of methods is facilitated by several synoptic tables.

**Numerical Ecology with R** Daniel Borcard, François Gillet, Pierre Legendre, 2018-03-19 This new edition of Numerical Ecology with R guides readers through an applied exploration of the major methods of multivariate data analysis as seen through the eyes of three ecologists. It provides a bridge between a textbook of numerical ecology and the implementation of this discipline in the R language. The book begins by examining some exploratory approaches. It proceeds logically with the construction of the key building blocks of most methods i.e. association measures and matrices and then submits example data to three families of approaches clustering ordination and canonical ordination. The last two chapters make use of these methods to explore important and contemporary issues in ecology the analysis of spatial structures and of community diversity. The aims of methods thus range from descriptive to explanatory and predictive and encompass a wide variety of approaches that should provide readers with an extensive toolbox that can address a wide palette of questions arising in contemporary multivariate ecological analysis. The second edition of this book features a complete revision to the R code and offers improved procedures and more diverse applications of the major methods. It also highlights important changes in the methods and expands upon topics such as multiple correspondence analysis principal response curves and co correspondence analysis. New features include the study of relationships between species traits and the environment and community diversity analysis. This book is aimed at professional researchers practitioners graduate students and teachers in ecology environmental science and engineering and in related fields such as oceanography molecular ecology agriculture and soil science who already have a background in general and multivariate statistics and wish to apply this knowledge to their data using the R language as well as people willing to accompany their disciplinary learning with practical applications. People from other fields e.g. geology, geography, paleoecology, phylogenetics, anthropology, the social and education sciences etc may also benefit from the materials presented in this book. Users are invited to use this book as a teaching companion at the computer. All the necessary data files the scripts used in the chapters as well as extra R functions and packages written by the authors of the book are available online URL <http://adn.biol.umontreal.ca/numerical-ecology/numecolR>
