Numerical Control Over Complex Analytic Singularities:

Numerical Control over Complex Analytic Singularities David B. Massey,2003 Generalizes the Le cycles and numbers to the case of hyper surfaces inside arbitrary analytic spaces This book defines the Le Vogel cycles and numbers and prove that the Le Vogel numbers control Thom s a_f condition It describes the relationship between the Euler characteristic of the Milnor fibre and the Le Vogel numbers **Numerical Control Over Complex Analytic Singularities** Christopher Hart,David B. Massey,2014-09-11 Overview Part I Algebraic Preliminaries Gap Sheaves and Vogel Cycles Introduction Gap sheaves Gap cycles and Vogel cycles The Le Iomdine Vogel formulas Summary of Part I Part II Le Cycles and Hypersurface Singularities Introduction Definitions and basic properties Elementary examples A handle decomposition of the Milnor fibre Generalized Le Iomdine formulas Le numbers and hyperplane arrangements Thom s a_f condition Aligned singularities Suspending singularities Constancy of the Milnor fibrations Another characterization of the Le cycles Part III Isolated Critical Points of Functions on Singular Spaces Introduction Critical avatars The relative polar curve The link between the algebraic and topological points of view The special case of perverse sheaves Thom s a_f condition Continuous families of constructible complexes Part IV Non Isolated Critical Points of Functions on Singular Spaces Introduction Le Vogel cycles Le Iomdine formulas and Thom s condition Le Vogel cycles and the Euler characteristic Appendix A Analytic cycles and intersections Appendix B The derived category Appendix C Privileged neighborhoods and lifting Milnor fibrations References Index **Multidimensional Residue Theory and Applications** Alekos Vidras,Alain Yger,2023-10-18 Residue theory is an active area of complex analysis with connections and applications to fields as diverse as partial differential and integral equations computer algebra arithmetic or diophantine geometry and mathematical physics Multidimensional Residue Theory and Applications defines and studies multidimensional residues via analytic continuation for holomorphic bundle valued current maps This point of view offers versatility and flexibility to the tools and constructions proposed allowing these residues to be defined and studied outside the classical case of complete intersection The book goes on to show how these residues are algebraic in nature and how they relate and apply to a wide range of situations most notably to membership problems such as the Brian on Skoda theorem and Hilbert s Nullstellensatz to arithmetic intersection theory and to tropical geometry This book will supersede the existing literature in this area which dates back more than three decades It will be appreciated by mathematicians and graduate students in multivariate complex analysis But thanks to the gentle treatment of the one dimensional case in Chapter 1 and the rich background material in the appendices it may also be read by specialists in arithmetic diophantine or tropical geometry as well as in mathematical physics or computer algebra Methods in the Theory of Hereditarily Indecomposable Banach Spaces Spiros Argyros,Andreas Tolias,2004 A general method producing Hereditarily Indecomposable H I Banach spaces is provided We apply this method to construct a nonseparable H I Banach space Y This space is the dual as well as the second dual of a separable H I Banach space Quasianalytic Monogenic

<u>Solutions of a Cohomological Equation</u> Stefano Marmi,D. Sauzin,2003 We prove that the solutions of a cohomological equation of complex dimension one and in the analytic category have a monogenic dependence on the parameter This cohomological equation is the standard linearized conjugacy equation for germs of holomorphic maps in a neighborhood of a fixed point   **The $RO(G)$-Graded Equivariant Ordinary Homology of G-Cell Complexes with Even-Dimensional Cells for $G=\mathbb {Z}/p$** ,   *Topology of Singular Spaces and Constructible Sheaves* Jörg Schürmann,2012-12-06 Assuming that the reader is familiar with sheaf theory the book gives a self contained introduction to the theory of constructible sheaves related to many kinds of singular spaces such as cell complexes triangulated spaces semialgebraic and subanalytic sets complex algebraic or analytic sets stratified spaces and quotient spaces The relation to the underlying geometrical ideas are worked out in detail together with many applications to the topology of such spaces All chapters have their own detailed introduction containing the main results and definitions illustrated in simple terms by a number of examples The technical details of the proof are postponed to later sections since these are not needed for the applications   **Self-Similarity and Multiwavelets in Higher Dimensions** Carlos A Cabrelli,Christopher Heil,Ursula M. Molter,2004 Let A be a dilation matrix an n times n expansive matrix that maps a full rank lattice Gamma subset R DEGREESn into itself Let Lambda be a finite subset of Gamma and for k in Lambda let c_k be r times r complex ma   **The Mathematical Legacy of Leon Ehrenpreis** Irene Sabadini,Daniele C. Struppa,2012-04-23 Leon Ehrenpreis has been one of the leading mathematicians in the twentieth century His contributions to the theory of partial differential equations were part of the golden era of PDEs and led him to what is maybe his most important contribution the Fundamental Principle which he announced in 1960 and fully demonstrated in 1970 His most recent work on the other hand focused on a novel and far reaching understanding of the Radon transform and offered new insights in integral geometry Leon Ehrenpreis died in 2010 and this volume collects writings in his honor by a cadre of distinguished mathematicians many of which were his collaborators   *Exceptional Vector Bundles, Tilting Sheaves and Tilting Complexes for Weighted Projective Lines* Hagen Meltzer,2004 Deals with weighted projective lines a class of non commutative curves modelled by Geigle and Lenzing on a graded commutative sheaf theory They play an important role in representation theory of finite dimensional algebras the complexity of the classification of coherent sheaves largely depends on the genus of these curves   <u>Mutually Catalytic Super Branching Random Walks: Large Finite Systems and Renormalization Analysis</u> J. T. Cox,Jeff Groah,Donald Andrew Dawson,Andreas Greven,2004 Studies the evolution of the large finite spatial systems in size dependent time scales and compare them with the behavior of the infinite systems which amounts to establishing the so called finite system scheme This title introduces the concept of a continuum limit in the hierarchical mean field limit   <u>Annales de l'Institut Fourier</u> ,2014   **Mathematical Reviews** ,2005-06   <u>Pure and Applied Mathematics Quarterly</u> ,2007   *Actes Du Colloque Franco-Japonais de Singularités en Géometrie Et Topologie* Jean-Paul Brasselet,Tatsuo Suwa,2007 This volume constitutes
