Laboratory Methods in Enzymology: Protein Jon Lorsch, 2013 These volumes of Methods in Enzymology contain the protocols that made up the on line Methods Navigator Our philosophy when we selected the protocols to include in the Navigator was that they should be for techniques useful in any biomedical laboratory regardless of the system the lab studies Each protocol was written by researchers who use the technique routinely and in many cases by the people who actually developed the procedure in the first place The protocols are very detailed and contain recipes for the necessary buffers and reagents as well as flow charts outlining the steps involved Many of the chapters have accompanying videos demonstrating key parts of the procedures In a few cases detailed protocols for certain important approaches could not be generated either because they are instrument specific e g next generation sequencing or because they are proprietary e g column based nucleic acid purifications In these cases we have included explanatory chapters that outline the theoretical basis for each technique without giving a detailed protocol The volumes are broken into distinct areas DNA methods Cell based methods lipid carbohydrate and miscellaneous methods RNA methods protein methods Our goal is that these protocols will be useful for everyone in the lab from undergraduates and rotation students to seasoned post doctoral fellows We hope that these volumes will become dog eared and well worn in your laboratory either physically or electronically
