Methods For Teaching Science As Inquiry:

Teaching Science as Inquiry Arthur A. Carin,Joel E. Bass,Terry L. Contant,2005 Research tells us that an inquiry approach to science teaching motivates and engages every type of student helping students understand science's relevance to their lives as well as the nature of science itself. But is there a manageable way for new and experienced teachers to bring inquiry into their science classrooms? *Teaching Science as Inquiry* models this effective approach to science teaching with a two part structure: *Methods for Teaching Science as Inquiry* and *Activities for Teaching Science as Inquiry*. The *Methods* portion scaffolds concepts and illustrates instructional models to help readers understand the inquiry approach to teaching. The *Activities* portion follows the 5 E model: Engage, Explore, Explain, Elaborate, Evaluate, which is a Learning Cycle model introduced in the *Methods* chapters that reflects the NSES Science as Inquiry Standards. Integrating an inquiry approach science content teaching methods standards and a bank of inquiry activities, *Teaching Science as Inquiry* demonstrates the manageable way for new and experienced teachers to bring inquiry into the science classroom. Integrated standards coverage in all chapters provides a clear picture of the best ways to let the NSES Standards inform instruction. Each activity is keyed to the NSES Standards, further developing new and experienced teachers' fluency with a standards-based science classroom. Margin notes throughout *Methods* chapters link readers to activities that model science teaching methods and the development of science content. Annenberg videos fully integrated in the text through reflective cases ground chapter concepts by illustrating inquiry teaching in classrooms.

Joyce Ann Striclyn, 2011 How should science be taught Is it enough to be familiar with vocabulary words and to learn concepts others have figured out Or should the desire to know be the initiator and sustainer of the learning situation How should science be taught This project studies the effect of using the 5E method of inquiry Engage Explore Explain Extend Evaluate to teach sixth grade students Of interest was the effect it would have on students attitude towards science their understanding of science content students data collection and data organizational skills students ability to design and conduct a controlled experiment and the effect on the teacher Ninety seven students were taught two units using the 5E method of inquiry The results were compared to units that were taught by non inquiry methods Student tests surveys interviews and performance

tests were considered in the analysis The conclusions were that students did improve data collection and organizational skills and in their ability to design and conduct a controlled experiment Content scores were actually lower for the inquiry unit Interviews and surveys indicated that students were more engaged in the inquiry units Survey results showed that students liked science less after the year of school but teacher observations and student interviews confirmed more engagement Survey results showed that the change in attitude was due to it being more complicated The units using inquiry methods took longer to complete than non inquiry units The teacher could not just cover the material Students needed time to process the information and discuss and explore with activities Inquiry methods created more work for me the teacher because I had to alter the activities to make them inquiry and compile student data to find patterns in student ideas The misconceptions were more obvious since students were required to explain and discuss and it took time to deal with these misconceptions It was exciting work because there was a strong feeling of engagement in the classroom Scientific Inquiry and Nature of Science Lawrence Flick,N.G.
