## Methods In Cell Biology Volume 20:

**Methods in Cell Biology** David M. Prescott, 1978 METHODS IN CELL BIOLOGY VOLUME 20 **Tetrahymena**

**Thermophila**, 1999-09-08 *Tetrahymena thermophila* is emerging as a powerful experimental system for functional genetics. The ciliated protozoan offers numerous advantages not the least of which is the ability to eliminate any specific gene of interest and then to evaluate the effect of that mutation on the living cell. Past investigations with *T. thermophila* have yielded several key discoveries including dynein catalytic RNA and telomerase. This volume is a comprehensive resource for using *Tetrahymena* in the laboratory and is aimed at persons already experienced as well as newcomers to the organism. It covers both the biological background and essential protocols for investigators rapidly turning to *Tetrahymena* as the experimental system of choice. Contains both theoretical and practical issues in 30 chapters contributed by the world authorities on *Tetrahymena*. Indispensable for both the novice and the experienced researcher. Overviews the history cell biology and genetics of the organism. Describes essential protocols on the growth of cells, genetic techniques and how to look at the cells with the microscope. Illustrates how the methods can be applied to solve various cell biological problems. Reviews recently developed strategies for altering gene expression.

*Destruction of Hazardous Chemicals in the Laboratory* George Lunn, Eric B. Sansone, 1994-04-14 Like its groundbreaking predecessor this Second Edition of *Destruction of Hazardous Chemicals* offers a collection of detailed procedures that can be used to degrade and dispose of a wide variety of hazardous chemicals. The book has been expanded and updated to broaden the scope of chemicals treated and to include new and modified procedures and alternatives to the use of some highly toxic materials. Entirely new chapters have been added on the removal of metal ions and biological stains from solution and the degradation of mycotoxins, enzyme inhibitors, polycyclic heterocyclic hydrocarbons and highly reactive reagents such as butyllithium, chlorosulfonic acid, peracids and phosgene. Another new chapter covers the alternatives to complex metal hydrides in the preparation of super dry solvents. A new appendix by Dr. Stephen W. Rhodes describes new technologies for the treatment of complex waste streams produced by biomedical research institutions. The procedures described are applicable to both laboratory and bulk quantities and to solutions in various solvents. Methods for cleaning up spills and solvents for wipe tests to ensure complete surface decontamination are frequently indicated. For laboratory scientists and workers concerned with occupational and environmental safety this book provides easy reference with a listing of hazardous compounds indexed by name, molecular formula and CAS registry number. For laboratory administrators it offers economical

alternatives to long term storage and costly shipping of hazardous chemicals to disposal facilities      **The Publishers'**
