Hemoglobins, Part C: Biophysical Methods Eraldo Antonini, Luigi Rossi-Bernardi, Johannes Everse, Emilia Chiancone, Kim D. Vandegriff, 1994-04-25 Hemoglobin has been involved in the most significant advances in our understanding of modern genetics and molecular biology. Now hemoglobin is again central to a new area: Development of artificial blood/blood substitute. This volume of *Methods in Enzymology* and its companion Volume 231 are indispensable to anyone with a serious interest in this emerging field. They completely update and extend the information presented in Volume 76, which was published more than 10 years ago. Key features: Molecular structure and dynamics; Spectroscopy; Ligand binding; Mathematical analysis and modeling.

Computer Methods for Macromolecular Sequence Analysis Russell F. Doolittle, 1996-05-23 This volume supplements Volume 183 in the *Methods in Enzymology* series and complements Volume 224. It addresses a variety of areas in which computers are used to manage and manipulate macromolecular sequence data. The manipulations include searching, aligning and determining the significance of similarities, as well as the construction of phylogenetic trees that show evolutionary history of related sequences.

Numerical Computer Methods, Part B Michael L. Johnson, Ludwig Brand, 1994 The contributions in this volume emphasize numerical analysis of experimental data and analytical biochemistry, with examples taken from biochemistry. They serve to inform biomedical researchers of the modern data analysis methods that have developed concomitantly with computer hardware.

Immunochemical Techniques Helen Van Vunakis, Giovanni Di Sabato, John Joseph Langone, 1988 From the Preface: Chemotaxis and inflammation, as many other biological processes, can be divided into humoral and cellular components. In this simplest sense, soluble activators or mediators of host or external origin interact with cells that respond to signals received and transmitted via specific membrane receptors. The biological consequences are dramatic and the biochemical mechanisms are complex and interrelated through a series of cascades that may involve several chemical messengers of different chemical classes. Volumes 162 and 163 of *Methods in Enzymology* cover *in vitro* and *in vivo* methodology that has been developed for the purpose of studying the biochemistry of these active

humoral factors and the biology of the cells and their receptors that respond to the various signals The literature dealing with chemotaxis and inflammation is extensive and new techniques are constantly being developed Therefore some selection has been necessary to include the most commonly used and generally applicable techniques Newer methods often involve significant modifications of established procedures and we have tried to insure that these innovations have been included
