## **Methods In Membranebiology Volume 5 Transport:**

Methods in Membrane Biology Edward D. Korn, 2013-11-21 The contributions of electron microscopy to membrane biology have been indispensable and at the same time disappointing. Membranes were known to exist before the advent of electron microscopy and general principles of their composition and molecular organization had been deduced from permeability and electrical conductivity measurements, polarized light microscopy and X-ray diffraction. On the other hand, the complexities of the many intracellular membranes and membranous organelles were really not suspected until they were observed by the electron microscopist. One then had further hopes that the high resolution of the electron microscope, theoretically it can resolve atomic distances, would allow the visualization of the molecular architecture of membranes and lead directly to an understanding of structure and function at the molecular level. This expectation has been largely unrealized. Because of the great difficulties encountered in the preparation of biological material, because of the uncertainty of the chemistry of staining and because of numerous electron optical artifacts, it has been a major challenge just to rationalize the observed images in terms of the known facts, let alone to utilize the images to expand our knowledge of the molecular structure of biological membranes. The many differences among membranes with respect to function and composition are lost in the universal trilamellar image. Perhaps the one major exception to this and the major structural contribution of electron microscopy at the molecular level has come from freeze-etch electron microscopy.

Methods in Membrane Biology Edward Korn, 2012-12-06 Many of the methods now in general use in membrane biology and not already discussed in satisfactory detail elsewhere have been covered in the eight previously published volumes of this series. Much of this ninth volume is occupied by one authoritative chapter, an unusually thorough and critical review of a relatively new and highly specialized technology that has gained rapid acceptance: immunofluorescence and immunoelectron microscopy. These are powerful experimental tools applicable in fields much broader than membrane research and employing methods drawn from widely diverse disciplines such as organic chemistry, protein chemistry, immunology and fluorescence and electron microscopy. The temptation to use these superficially and deceptively simple but fundamentally complex methods uncritically is almost overwhelming. The chapter by de Petris, a pioneer in the field, is as necessary as it is rigorous and it should long be the standard in this area of research. The second chapter in this volume is a more specialized review by Matus of the procedures for the preparation and characterization of the highly differentiated junctional regions of brain plasma membranes. These methods are central to the rapidly growing field of neurobiochemistry, membrane biochemistry, at perhaps its most intricate.

**Methods in Membrane Biology**, 1976 Symposium on the Pharmacological Effect of Lipids Jon J. Kabara, 1978 *Electrochemistry* H. R. Thirsk, 2007-10-31 Specialist Periodical Reports provide systematic and detailed review coverage of progress in the major areas of chemical research. Written by experts in their specialist fields, the series creates a unique service for the active research chemist, supplying regular critical in-depth accounts of progress in particular

areas of chemistry For over 80 years the Royal Society of Chemistry and its predecessor the Chemical Society have been publishing reports charting developments in chemistry which originally took the form of Annual Reports However by 1967 the whole spectrum of chemistry could no longer be contained within one volume and the series Specialist Periodical Reports was born The Annual Reports themselves still existed but were divided into two and subsequently three volumes covering Inorganic Organic and Physical Chemistry For more general coverage of the highlights in chemistry they remain a must Since that time the SPR series has altered according to the fluctuating degree of activity in various fields of chemistry Some titles have remained unchanged while others have altered their emphasis along with their titles some have been combined under a new name whereas others have had to be discontinued
