Methods In Pain Research:

Methods in Pain Research Lawrence Kruger, 2001-06-22 In the past two decades pain research has become one of the most rapidly growing areas of neuroscience activity *Methods in Pain Research* brings together in a single volume a survey of the methods that can be used to study a reaction or sensory report in humans that can only be inferred by indirect means in animal or tissues studies It presents

Pain Research Z. David Luo, 2008-02-02 The detrimental impacts of pain on the quality of our daily life have drawn increasing attention from researchers health care providers policymakers and social workers The reality of effective painkillers specifically designed for different types of pain states has been obscured by missing knowledge of the mechanisms of different types of pain Thus studying the complexity of pain transduction which includes various insults to the peripheral nervous systems sensitized spinal circuits and altered signals ascending to or descending from the brain has emerged as a high priority task on the agenda of pharmaceutical companies and other private as well as public agencies To accomplish this mission one requires a combination of well integrated systems such as animal models resembling the pathological conditions of pain transduction and an understanding of the interactions among pain transducers and mediators at the molecular level Thanks to rapid advancements in the development of novel cellular and molecular biology techniques as well as in our understanding of physiology and of the behavioral pharmacology of pain transduction the time is now ripe for dissecting the molecular mechanisms of pain transduction using multidisciplinary approaches Indeed my acceptance of the invitation from the series editor Dr John Walker to assemble a book of methods and protocols for pain research was inspired by these emerging needs The purpose of *Pain Research Methods and Protocols* is to provide step by step methods and protocols of multidisciplinary approaches related to the study of pain transduction

Methods of Animal Experimentation William I. Gay, 2013-09-03 *Methods of Animal Experimentation Volume VI* is a compendium of papers that defines which animals will prove most useful in biological experiments using the best methods in an environment of complex technologies and therapies One paper reviews the genetic methods in animal experimentation including tests of Mendelian ratios chromosomes crossing over chromosome anomalies and gene transfer that produces congenic strains Another paper explains the concepts and methodologies used in animals in ophthalmic research particularly in ocular pharmacology aqueous humor dynamics glaucoma and animal models of non infectious uveitis One paper analyzes the neural mechanisms of pain in an intact nervous system following ethical and moral principles of human treatment For example the use of different stimuli to elicit pain is applied only in situations where the stimuli is more appropriate whether in behavioral or physiological experiments The paper provides a list of requirements for the ideal pain stimulus Another paper describes the methods in using standard animal models when an unknown agent is to be given as a general or local anesthesia This book can prove beneficial to researchers scientists and laboratory technicians dealing with animals in relation to pharmacological biological chemical and physiological research
