Methods In Polyphenol Chemistry

J. B. Pridham

Methods In Polyphenol Chemistry:

Methods in Polyphenol Chemistry J. B. Pridham, 2013-10-22 *Methods in Polyphenol Chemistry* documents the proceedings of the Plant Phenolics Group Symposium held at the University of Oxford on 24 April 1963. The symposium focused on the methods and techniques which made advances in the chemistry and biochemistry of phenolic compounds possible. The development of paper chromatographic and ultraviolet spectroscopic techniques was particularly important and largely responsible for the rapid growth in knowledge of polyphenols which has occurred during the last 10-15 years. In addition to these two methods, other spectroscopic techniques were dealt with at the symposium. Particular mention should perhaps be made of nuclear magnetic resonance spectroscopy which is becoming increasingly important in polyphenol chemistry. Modern chromatographic methods such as thin layer and gas liquid techniques will probably be used extensively in the future. These will enable the analyses of polyphenol mixtures to be carried out more rapidly and with greater resolution. Polyamide chromatography also has high powers of resolution although this technique has not been widely used owing to difficulties in obtaining supplies of polyamide powder. This situation has now improved however. **Methods in Polyphenol**

Analysis Celestino Santos-Buelga, Gary Williamson, 2003 Polyphenols make a vital contribution to the colour, tanning, taste and astringency of so many of society's favourites from the unique taste of the British cup of tea to a glass of red wine. Found widely in many foods of plant origin, polyphenols are also becoming increasingly recognised as antioxidants in the body with action on long term health and reduction in the risk of chronic disease. Due to the importance of polyphenols, it is vital to conduct accurate and sensitive analysis. Providing detailed state of the art research presented in a practical and effective way, *Methods in Polyphenol Analysis* looks at the latest techniques in this developing field and includes among others: New modern techniques such as LC-MS, LC-NMR and LC coulometric detection; Chemical and enzymatic synthesis of polyphenol conjugates; and Characterization of oligomeric and polymeric tannins and complex polyphenols. This timely publication is written by highly experienced practitioners in this field and will be invaluable to all academics and industrialists involved in phytochemistry, biochemistry and food science. *Methods in Polyphenol Chem* J.
