**Topological Methods in Nonlinear Analysis** ,2002      **Model Abstraction in Dynamical Systems: Application to Mobile Robot Control** Patricia Mellodge,Pushkin Kachroo,2008-09-02 The subject of this book is model abstraction of dynamical systems The primary goal of the work embodied in this book is to design a controller for the mobile robotic car using abstraction Abstraction provides a means to represent the dynamics of a system using a simpler model while retaining important characteristics of the original system A second goal of this work is to study the propagation of uncertain initial conditions in the framework of abstraction The summation of this work is presented in this book It includes the following An overview of the history and current research in mobile robotic control design A mathematical review that provides the tools used in this research area The development of the robotic car model and both controllers used in the new control design A review of abstraction and an extension of these ideas into new system relationship characterizations called traceability and traceability A framework for designing controllers based on abstraction An open loop control design with simulation results An investigation of system abstraction with uncertain initial conditions      **Safe Adaptive Control** Margareta Stefanovic,Michael G. Safonov,2011-02-10 Safe Adaptive Control gives a formal and complete algorithm for assuring the stability of a switched control system when at least one of the available candidate controllers is stabilizing The possibility of having an unstable switched system even in the presence of a stabilizing candidate controller is demonstrated by referring to several well known adaptive control approaches where the system goes unstable when a large mismatch between the unknown plant and the available models exists plant model mismatch instability Sufficient conditions for this possibility to be avoided are formulated and a recipe to be followed by the control system designer to guarantee stability and desired performance is provided The problem is placed in a standard optimization setting Unlike the finite controller sets considered elsewhere the candidate controller set is allowed to be continuously parametrized so that it can deal with plants with a very large range of uncertainties      **Iterative Methods for the Solutions of Non-linear Operator Equations in Hilbert Space** M.
