Alternative Mathematical Theory of Non-equilibrium Phenomena Dieter Straub,1996-10-09 Alternative Mathematical Theory of Non equilibrium Phenomena presents an entirely new theoretical approach to complex non equilibrium phenomena especially Gibbs Falk thermodynamics and fluid mechanics This innovative new theory allows for inclusion of all state variables and introduces a new vector dissipation velocity which leads to useful restatements of momentum the Second Law and tensors for the laws of motion friction and heat conduction This application oriented text is relatively self contained and is an excellent guide book for engineers with a strong interest in fundamentals or for professionals using applied mathematics and physics in engineering applications This book emphasizes macroscopic phenomena focusing specifically on gaseous states though relations to liquid and crystalline states are also considered The author presents a new Alternative Continuum Theory of Compressible Fluids AT which provides a qualitative description of the subject in predominantly physical terms minimizing the mathematical premises The methodology discussed has applications in a wide range of fields outside of physics in areas including General System Theory TheoreticalEconomics and Biophysics and Medicine Presents the first theory capable of handling non equilibria phenomena Offers a unified theory of all branches of macroscopic physics Considers a consistent and uniform view of reality supported by modern mathematics leading to results different than those produced by classical theories Results in a change of paradigms in physics engineering and natural philosophy
