Invisible Labour in Modern Science Jenny Bangham,Xan Chacko,Judith Kaplan,2022-09-01 Invisible Labour in Modern Science is about the people who are concealed eclipsed or anonymised in accounts of scientific research Many scientific workers including translators activists archivists technicians curators and ethics review boards are absent in publications and omitted from stories of discovery Scientific reports are often held to ideals of transparency yet they are the result of careful judgments about what and what not to reveal Professional scientists are often celebrated yet they are expected to uphold principles of objective self denial The emerging and leading scholars writing in this book negotiate such silences and omissions to reveal how invisibilities have shaped twentieth and twenty first century science Invisibility can be unjust it can also be powerful What is invisible to whom and when does this matter How do power structures built on hierarchies of race gender class and nation frame what can be seen And for those observing science When does the recovery of the invisible serve social justice and when does it invade privacy Tackling head on the silences and dilemmas that can haunt historians this book transforms invisibility into a guide for exploring the moral sensibilities and politics of science and its history

The Philosophy of Biology Marjorie Grene,David Depew,2004-08-02 Is life different from the non living If so how And how in that case does biology as the study of living things differ from other sciences These questions are traced through an exploration of episodes in the history of biology and philosophy The book begins with Aristotle then moves on to Descartes comparing his position with that of Harvey In the eighteenth century the authors consider Buffon and Kant In the nineteenth century the authors examine the Cuvier Geoffroy debate pre Darwinian geology and natural theology Darwin and the transition from Darwin to the revival of Mendelism Two chapters deal with the evolutionary synthesis and such questions as the species problem the reducibility or otherwise of biology to physics and chemistry and the problem of biological explanation in terms of function and teleology The final chapters reflect on the implications of the philosophy of biology for philosophy of science in general

The Paleobiological Revolution David Sepkoski,Michael Ruse,2015-03-04 The Paleobiological Revolution chronicles the incredible ascendance of the once maligned science of paleontology to the vanguard of a field With the establishment of the modern synthesis in the 1940s and the pioneering work of George Gaylord Simpson Ernst Mayr and Theodosius Dobzhansky as well as the subsequent efforts of Stephen Jay Gould David Raup and James Valentine paleontology became embedded in biology and emerged as paleobiology a first rate discipline central to evolutionary studies Pairing contributions from some of the leading actors of the transformation with overviews from historians and philosophers of science the essays here capture the excitement of the seismic changes in the discipline In so doing David Sepkoski and Michael Ruse harness the energy of the past to call for further study of the conceptual development of modern paleobiology Proceedings, American Philosophical Society (vol. 145, no. 4, 2001) , *Science & Public Policy* ,2003 *History and Philosophy of the Life Sciences* ,2002 *Forecasting Travel in Urban America*

Konstantinos Chatzis, 2023-07-11 A history of urban travel demand modeling UTDM and its enormous influence on American life from the 1920s to the present For better and worse the automobile has been an integral part of the American way of life for decades Its ascendance would have been far less spectacular however had engineers and planners not devised urban travel demand modeling UTDM This book tells the story of this irreplaceable engineering tool that has helped cities accommodate continuous rise in traffic from the 1950s on Beginning with UTDM s origins as a method to help plan new infrastructure Konstantinos Chatzis follows its trajectory through new generations of models that helped make optimal use of existing capacity and examines related policy instruments including the recent use of intelligent transportation systems Chatzis investigates these models as evolving entities involving humans and nonhumans that were shaped through a specific production process In surveying the various generations of UTDM he delves into various means of production from tabulating machines to software packages and travel survey methods from personal interviews to GPS tracking devices and smartphones used to obtain critical information He also looks at the individuals who have collectively built a distinct UTDM social world by displaying specialized knowledge developing specific skills and performing various tasks and functions and by communicating interacting and even competing with one another Original and refreshingly accessible Forecasting Travel in Urban America offers the first detailed history behind the thinkers and processes that impact the lives of millions of city dwellers every day
